Solidification and Casting B. Cantor, Keyna O'Reilly, 2003 Written by leading experts in their respective fields Solidification and Casting provides a comprehensive review of topics fundamental to metallurgy and materials science as well as indicates recent trends From an industrial perspective the book begins with chapters on the casting techniques most commonly used in industry today It then describes the underlying science fundamental to solidification mechanisms including fluid flow the effects of cooling rates modern simulation and modelling methods in use and their application in various casting scenarios Next the authors consider the microstructure of cast materials and their defects and explore how different casting processes can control these parameters The book concludes with the most recent developments in the field and discusses new processes and materials such as novel alloys and composites metallic glasses ceramics and superconducting oxides

Maijer, Charles Andrew Monroe, Adrian S. Sabau, Roxana Ruxanda, Alan A. Luo, Subhayu Sen, Attila Diószegi, 2015-02-18 The book contains the proceedings of the honorary symposium Advances in the Science and Engineering of Casting Solidification TMS2015 Orlando Florida March 15 19 2015 held in honor of Professor Doru Michael Stefanescu Emeritus Professor Ohio State University and the University of Alabama USA The book encompasses the following four areas 1 Solidification processing theoretical and experimental investigations of solidification processes including castings solidification directional solidification of alloys electromagnetic stirring ultrasonic cavitation mechanical vibration active cooling and heating powder bed electron beam melting additive manufacturing etc for processing of metals polymers and composite materials 2 Microstructure Evolution theoretical and experimental studies related to

microstructure evolution of materials including prediction of solidification related defects and particle pushing engulfment aspects 3 Novel Casting and Molding Processes modeling and experimental aspects including high pressure die casting permanent casting centrifugal casting low pressure casting 3D silica sand mold printing etc and 4 Cast Iron all aspects related to cast iron characterization computational and analytical modeling and processing Science and Engineering of Casting Solidification, Second Edition Doru Michael Stefanescu, 2008-12-03 Stefanescu here attempts to describe solidification theory through the complex mathematical apparatus required for a fundamental treatment of the problem The mathematics is however restricted to the elements essential to attain a working knowledge in the field This is in line with the main goal of the book which is to educate the reader in the fast moving area of computational modeling of solidification of castings A special effort has been made to introduce the reader to the latest developments in solidification theory including in this second edition a new chapter on semi solid casting EPD Congress 2013 Michael L.
