Soft Computing in Textile Engineering Abhijit Majumdar, 2010-11-29 Soft computing refers to a collection of computational techniques which study model and analyse complex phenomena As many textile engineering problems are inherently complex in nature soft computing techniques have often provided optimum solutions to these cases Although soft computing has several facets it mainly revolves around three techniques artificial neural networks fuzzy logic and genetic algorithms The book is divided into five parts covering the entire process of textile production from fibre manufacture to garment engineering These include soft computing techniques in yarn manufacture and modelling fabric and garment manufacture textile properties and applications and textile quality evaluation Covers the entire process of textile production from fibre manufacture to garment engineering including artificial neural networks fuzzy logic and genetic algorithms Examines soft computing techniques in yarn manufacture and modelling fabric and garment manufacture Specifically reviews soft computing in relation to textile

properties and applications featuring garment modelling and sewing machines

Soft Computing in Measurement and Information Acquisition Leon Reznik, Vladik Kreinovich, 2012-12-06 This volume covers the fields of measurement and information acquisition It contains a collection of papers representing the current research trends in these areas What are those trends The first one is the enormous growth in the amount of information and the amazing technologies which make this information available anywhere and anytime The second one is a substantial development of methods of the information presentation including to name just a few multimedia virtual environment computer animation The third one is the all time boosting demand for improving the quality of decisions made on the base of this information in various applications ranging

from engineering to business Nowadays information acquisition should not only provide more information but also provide it in such a way as to assure effective and efficient processing of this information And here comes a relatively new methodology of soft computing Application of soft computing in measurement and information acquisition is considered in this volume

Simulation in Textile Technology D Veit,2012-06-11 The use of mathematical modelling and computer simulation can vastly improve the quality efficiency and economic success of textile technology Simulation in textile technology provides a comprehensive review of the key principles applications and benefits of modelling for textile production After an introduction to modelling and simulation Simulation in textile technology goes on to review the principles and applications of the main types of model The book first discusses neural networks and their applications before going on to explore evolutionary methods and fuzzy logic It then considers computational fluid dynamics and finite element modelling The modelling of fibrous structures and yarns are considered in the following chapters along with wound packages woven braided and knitted structures The book concludes by reviewing the simulation of textile processes and machinery With its distinguished editor and team of expert contributors Simulation in textile technology is a valuable reference tool for all those involved in both developing models of textile processes and those applying them to improve process efficiency and product quality Provides a comprehensive review of the key principles applications and benefits of modelling for textile production Discusses neural networks and their applications before going on to explore evolutionary methods and fuzzy logic Considers the modelling of fibrous structures and yarns along with wound packages woven braided and knitted structures **Applied Decision**

Support with Soft Computing Xinghuo Yu,2012-12-06 Soft computing has provided sophisticated methodologies for the development of intelligent decision support systems Fast advances in soft computing technologies such as fuzzy logic and systems artificial neural networks and evolutionary computation have made available powerful problem representation and modelling paradigms and learning and optimisation mechanisms for addressing modern decision making issues This book provides a comprehensive coverage of up to date conceptual frameworks in broadly perceived decision support systems and successful applications Different from other existing books this volume predominately focuses on applied decision support with soft computing Areas covered include planning management finance and administration in both the private and public sectors
