This edition has been completely updated and contains hundreds of new references to software tools. **Automating Systems Development** David R. Benyon, Steve Skidmore, 2012-12-06

1 INTRODUCTION These proceedings are the result of a conference on Automating Systems Development held at Leicester Polytechnic England on 14 to 16 April 1987. The conference was attended by over 170 delegates from industry and academia and it represents a comprehensive review of the state of the art of the use of the computer based tools for the analysis, design and construction of Information Systems. IS Two parallel streams ran throughout the conference. The academic or research papers were the fruit of British, European and Canadian research with some of the papers reflecting UK Government funded Alvey or European ESPRIT research projects. Two important touchstones guided the selection of academic papers. Firstly they should be primarily concerned with system rather than program development. Secondly they should be easily accessible to delegates and readers. We felt that formal mathematical papers had plenty of other opportunities for airing and publication. The second stream was the applied programme a set of formal presentations given by leading software vendors and consultancies. It is clear that many advances in systems development are actually applied rather than research led. Thus it was important for delegates to hear how leading edge companies view the State of the Art. This was supported by a small exhibition area where certain vendors demonstrated the software they had introduced in the formal presentation.

Guide to the Software Engineering Body of Knowledge Alain Abran, James W. Moore, 2004

The purpose of the Guide to the Software Engineering Body of Knowledge is to provide a validated classification of the bounds of the software engineering discipline and topical access that will support this discipline. The Body of Knowledge is subdivided into ten software engineering Knowledge Areas (KAs) that differentiate among the various important concepts, allowing readers to find their way quickly to subjects of interest. Upon finding a subject, readers are referred to key papers or book chapters. Emphases on engineering practice lead the Guide toward a strong relationship with the normative literature. The normative literature is validated by consensus formed among practitioners and is concentrated in standards.
