Solder Joint Reliability Assessment Mohd N. Tamin, Norhashimah M. Shaffiar, 2014-04-26 This book presents a systematic approach in performing reliability assessment of solder joints using Finite Element FE simulation Essential requirements for FE modelling of an electronic package or a single reflowed solder joint subjected to reliability test conditions are elaborated These cover assumptions considered for a simplified physical model FE model geometry development constitutive models for solder joints and aspects of FE model validation Fundamentals of the mechanics of solder material are adequately reviewed in relation to FE formulations Concept of damage is introduced along with deliberation of cohesive zone model and continuum damage model for simulation of solder IMC interface and bulk solder joint failure respectively Applications of the deliberated methodology to selected problems in assessing reliability of solder joints are demonstrated These industry defined research based problems include solder reflow cooling temperature cycling and mechanical fatigue of a BGA package JEDEC board level drop test and mechanisms of solder joint fatigue Emphasis is placed on accurate quantitative assessment of solder joint reliability through basic understanding of the mechanics of materials as interpreted from results of FE simulations The FE simulation methodology is readily applicable to numerous other problems in mechanics of materials and structures
