## **Solid State Physics By Arun Kumar:**

*INTRODUCTION TO SOLID STATE PHYSICS, Second Edition* KUMAR, ARUN, 2015-10-01 Introduction to Solid State Physics in its Second Edition provides a comprehensive introduction to the physical properties of crystalline solids. It explains the structure of crystals, theory of crystal diffraction and the reciprocal lattice. As the book advances, it describes different kinds of imperfections in crystals, bonding in solids and vibration in one dimensional monoatomic and diatomic linear lattice. Different theories of specific heat, thermal conductivity of solids and lattice thermal conductivity are thoroughly dealt with. Coverage also includes the free electron theory, band theory of solids and semiconductors. In addition, the book also describes in detail the magnetic properties of solids and superconductivity. Finally, the book includes discussions on lasers, nanotechnology and the basic principles of fibre optics and holography. Some new topics like cellular method, quantum Hall effect, de Haas van Alphen effect, Pauli paramagnetism and semiconductor laser have been added in the present edition of the book to make it more useful for the students. The book is designed to meet the requirements of undergraduate and postgraduate students of physics for their courses in solid state physics, condensed matter physics and material science. **KEY FEATURES** Puts a conceptual emphasis on the subject. Includes numerous diagrams and figures to clarify the concepts. Gives step by step explanations of theories. Provides chapter end exercises to test the knowledge acquired. **Basic Solid State**

**Physics** Dr. Arunkumar Raychaudhuri, 2014-04-01 **World Directory of Crystallographers** Yves Epelboin, 2013-04-17 The 10th edition of the World Directory of Crystallographers and of Other Scientists Employing Crystallographic Methods is a revised and up to date edition of the World Directory and contains the current addresses, academic status and research interests of over 8000 scientists in 74 countries. It is produced directly from the regularly updated electronic World Directory database which is accessible via the World Wide Web. Full details of the database are given in an Annex to the printed edition.

**World Directory of Crystallographers** Allan L. Bednowitz, Armin P. Segmüller, 2013-04-17 A brief historical account of the background leading to the publication of the first four editions of the World Directory of Crystallographers was presented by G. Boom in his preface to the Fourth Edition published late in 1971. That edition was produced by traditional typesetting methods from compilations of biographical data prepared by national Sub Editors. The major effort required to produce a directory by manual methods provided the impetus to use computer techniques for the Fifth Edition. The account of the production of the first computer assisted Directory was described by S. C. Abrahams in the preface of the Fifth Edition. Computer composition which required a machine readable data base offered several major advantages. The choice of typeface and range of characters was flexible. Corrections and additions to the data base were rapid and once established it was hoped updating for future editions would be simple and inexpensive. The data base was put to other Union uses such as preparation of mailing labels and formulation of lists of crystallographers with specified common fields of interest. The Fifth Edition of the World Directory of Crystallographers was published in June of 1977, the Sixth in May of 1981. The Subject Indexes for the
