SKYWARN is a National Weather Service NWS program developed in the 1960s that consists of trained weather spotters who provide reports of severe and hazardous weather to help meteorologists make life saving warning decisions. Spotters are concerned citizens amateur radio operators truck drivers mariners airplane pilots emergency management personnel and public safety officials who volunteer their time and energy to report on hazardous weather impacting their community. Although NWS has access to data from Doppler radar satellite and surface weather stations technology cannot detect every instance of hazardous weather. Spotters help fill in the gaps by reporting hail wind damage flooding heavy snow tornadoes and waterspouts. Radar is an excellent tool but it is just one tool among many that NWS uses. We need spotters to report how storms and other hydro meteorological phenomena are impacting their area. SKYWARN spotter reports provide vital ground truth to the NWS. They act as our eyes and ears in the field. Spotter reports help our meteorologists issue timely accurate and detailed warnings by confirming hazardous weather detected by NWS radar. Spotters also provide critical verification information that helps improve future warning services. SKYWARN Spotters serve their local communities by acting as a vital source of information when dangerous storms approach. Without spotters NWS would be less able to fulfill its mission of protecting life and property. This guide provides the procedures for Spotter Reporting their role in severe storms that may result in hazardous conditions and provides safety tips for extreme weather conditions. Section 2 of this guide showcases Basics of several elements that impact severe or strong storms. A significant portion of Section 2 is dedicated to thunderstorms and how they can evolve into tornadoes and Supercells. Section 3 takes a closer look at tornadoes the impact with lightning wind Supercells and more. Section 4 features Technology and Storm Spotting covering Doppler weather radar from types of radar to radar imaging satellites types of to satellite imaging storm movement and spotter location is also addressed in this section.
