**Positioning the Academic Library within the University** Leo Appleton, 2021-05-13 Academic libraries are facing uncertain times The international higher education environment is very volatile and academic libraries and librarians can play a major role in helping to strategically position their parent institution within it In doing so there needs to be clarity as to what the position of the academic library is with regard to the role and function it has within the university and how library leadership can have pan institutional influence and impact There are several ways in which the academic library can position itself and this collection demonstrates many of these Strategic alignment with the university and its mission is a fundamental part of successful positioning as is being flexible adaptable and responsive to changing needs requirements and expectations Developments in research support and scholarly communications as well as super convergences with other academic support departments are

examples of such responsiveness These topics along with other emerging themes such as library functions and institutional partnerships and collaborations are all discussed in the book and provide the reader with a rich variety of reflections and case studies on how academic libraries from across the globe have addressed their position within their institution This book was originally published as a special issue of the journal *New Review of Academic Librarianship*

**Violating the Law of One Price** Charles Engel, John H. Rogers, 1999 We use new disaggregated data on consumer prices to determine why there is variability in prices of similar goods across U S cities We address questions similar to those that have arisen in the international context is this variability purely a result of market segmentation or do sticky nominal prices play a role We also examine how the degree of tradability of a good influences price variability Surprisingly we find that variability is larger for traded goods We attribute this finding to greater price stickiness for non traded goods Distance between cities accounts for a significant amount of the variation in prices between pairs of cities But we also find that nominal price stickiness plays an even more significant role

**Working Paper Series**, 1999

**Size and Growth of Japanese Plants in the United States** Bruce A. Blonigen, KaSaundra Tomlin, 1999 Using a unique database on all Japanese manufacturing plants in the United States we examine the relationship between plant size and growth for these foreign owned plants These plants average sizes are three times larger than comparable U S plants and experienced 30 percent growth from 1987 through 1990 while U S average plant sizes declined over the same period Our estimates strongly reject Gibrat s Law for these plants and suggest that smaller plants grow faster We also find learning affects plant level growth Newer plants grow quicker and previous

investments by the parent firm mean slower growth particularly for automobile related plants Both are consistent with inexperienced firms growing faster as they learn **Newsweek** Raymond Moley, Samuel Thurston Williamson, Malcolm Muir, Rex Smith, Joseph Becker Phillips, 2007 **Consumption Over the Life Cycle** Pierre-Olivier Gourinchas, Jonathan A. Parker, 2000 This paper employs a synthetic cohort technique and Consumer Expenditure Survey data to construct average age profiles of consumption and income over the working lives of typical households across different education and occupation groups Using these profiles we estimate a structural model of optimal life cycle consumption expenditures in the presence of realistic labor income uncertainty The model fits the profiles quite well In addition to providing tight estimates of the discount rate and risk aversion we find that consumer behavior changes strikingly over the life cycle Young consumers behave as buffer stock agents Around age 40 the typical household starts accumulating liquid assets for retirement and its behavior mimics more closely that of a certainty equivalent consumer This change in behavior is mostly driven by the life cycle profile of expected income Our methodology provides a natural decomposition of saving into its precautionary and retirement components *Tax Policy and Consumer Spending* Katsunori Watanabe, Takayuki Watanabe, Tsutomu Watanabe, 1999 This paper studies the extent to which the impact of tax policy on consumer spending differs between temporary and permanent as well as anticipated and unanticipated tax changes To discriminate between them we use institutional information such as legal distinction between temporary and permanent tax changes as well as timing of policy announcement and implementation We find that the impact of temporary changes is significantly smaller than the impact of permanent changes We also find that more than 80 per cent of Japanese consumers including those who distinguish between temporary and permanent tax changes respond to tax changes at the time of their implementation and not at the time of a policy announcement We suggest an interpretation that these consumers follow a near rational decision rule

**Determinants of the Japan Premium** Joe Peek, Eric S. Rosengren, 1998 Since August 1995 Japanese banks have had to pay a premium on Eurodollar and Euroyen interbank loans relative to their U S and U K competitors This so called Japan premium provides a market indicator of investor anxiety about the ability of Japanese banks to repay loans We examine the determinants of the Japan premium and find that government announcements not associated with concrete actions had little impact On the other hand announcements of concrete actions by the Japanese government such as injections of funds into the banking system tended to have an effect on the size of the Japan premium *On Crisis Prevention* Sebastian Edwards, 1999 This paper provides a comparative analysis of the East Asian and Mexican crises and draws lessons for the emerging economies Although much of the discussion concentrates on East Asia and Mexico I also draw on the history of some previous crisis episodes I argue that in spite of the efforts to understand the anatomy of currency crises there are still a large number of controversial and unresolved issues More to the point I argue that some of the lessons extracted from these crises are based on a misreading of the historical record As a result some of the policy implications that have emerged from

this debate are to say the least questionable In particular I make two points First I argue that in general current account ratios have limited usefulness in determining a country's financial health Although I fall short of taking the position that the current account is completely irrelevant I do argue that a rigid interpretation of current account ratios may be highly misleading Second I argue that the rapidly growing popularity of controls on capital inflows as a device for reducing external vulnerability is rooted in a misreading of the recent history of external crises

### **The Effect of File-sharing on Consumer's Purchasing Pattern** Seonmi Lee,2006

*No Contagion, Only Interdependence* Kristin Forbes,Roberto Rigobón,1999 This paper examines stock market co movements It begins with a discussion of several conceptual issues involved in measuring these movements and how to test for contagion Standard tests examine if cross market correlation in stock market returns increase during a period of crisis The measure of cross market correlations central to this standard analysis however is biased The unadjusted correlation coefficient is conditional on market movements over the time period under consideration so that during a period of turmoil when stock market volatility increases standard estimates of cross market correlations will be biased upward It is straightforward to adjust the correlation coefficient to correct for this bias The remainder of the paper applies these concepts to test for stock market contagion during the 1997 East Asian crises the 1994 Mexican peso collapse and the 1987 U S stock market crash In each of these cases tests based on the unadjusted correlation coefficients find evidence of contagion in several countries while tests based on the adjusted coefficients find virtually no contagion This suggests that high market co movements during these periods were a continuation of strong cross market linkages In other words during these three crises there was no contagion only interdependence

### *A Tax on Output of the Polluting Industry is Not a Tax on Pollution* Don Fullerton,Inkee Hong,Gilbert E. Metcalf,1999 We explore the effects of environmental taxes that imprecisely target pollution A review of actual policies indicates few if any examples of a true tax on pollution More typically environmental taxes target an input or output that is correlated with pollution We construct a simple analytical general equilibrium model to calculate the optimum tax rate on the input of the polluting industry in terms of key behavioral parameters and we compare this imprecisely targeted tax to an ideal tax on pollution Finally we consider incremental tax reforms such as a change in either tax from some pre existing level Using a utility based money metric measure of welfare we examine the losses that arise from not taxing pollution directly With no existing tax under our plausible parameters the welfare gain from an output tax is less than half the gain from an emissions tax

### **The Effects of Direct Foreign Investment on Local Communities** David N. Figlio,Bruce A. Blonigen,1999 The large increase in direct foreign investment DFI into the United States in the late 1980s has generated considerable research on why these flows occurred and where these foreign firms located However very little has been done to evaluate the impact these foreign firms have on the local communities in which they locate As a first step in addressing this topic we use detailed county level panel data from South Carolina across 5 year intervals from 1980 through 1995 to investigate the effect of foreign manufacturing

firms on local labor markets and on the level and distribution of local government budgets We find that manufacturing employment by foreign firms has a substantial impact on industry wages and county budgets which is significantly different from domestic manufacturing employment With respect to wages we find that while increased manufacturing employment generally increases county wages in an average two digit industry this effect is more than seven times larger when the employment growth comes from a foreign firm rather than a domestic one On the budget side we find that foreign employment leads to larger declines in per capita revenues and expenditures at the county level and to significant redistribution of county expenditures away from public school funding and toward transportation and public safety

Research Alert Yearbook ,2001      **Can Capital Mobility be Destabilizing?** Qinglai Meng,Andrés Velasco,1999 In a standard two sector neoclassical model with distortions capital mobility can render the steady state indeterminate in the sense that there exist infinitely many convergent paths In the closed economy with no international capital mobility the utility function must be linear or close to it for indeterminacy to occur while in the open economy the shape of the utility function makes no difference The reason is that in the no mobility case changes in aggregate investment must be matched by changes in aggregate consumption while in the case of full capital mobility they can simply be financed by borrowing abroad The paper provides some theoretical underpinnings to the concerns that de regulating the capital account may be destabilizing
