

3. Install another nut on other side of furnace base. (Install flat washer if desired.)
4. Adjust outside nut to provide desired height, and tighten inside nut to secure arrangement.

#### Step 5—Gas Piping

Gas piping must be installed in accordance with national and local codes. Refer to the current edition of the NFPA, Canadian installations must be installed in accordance with NSCNPIC and all authorities having jurisdiction.

The gas supply line should be a separate line running directly from the gas meter to the furnace, if possible. Refer to Table 4 for the recommended gas pipe size. Risers must be used to connect to the furnace and the meter.

#### ⚠ CAUTION

If a flexible connector is required or allowed by the authority having jurisdiction, black iron pipe shall be installed at the gas valve and extend a minimum of 2 in. outside the furnace casing.

Piping should be pressure-tested in accordance with local and national plumbing and gas codes before the furnace has been smacked. If the pressure exceeds 0.5 psig (14-in. wc), the gas supply pipe must be disconnected from the furnace and capped before the pressure test. If the test pressure is equal to or less than 0.5 psig (14-in. wc), close the manual shut-off valve located on the gas valve before the test. It is recommended that the ground joint

union be loosened before pressure testing. After all connections have been made, purge the lines and check for leakage with regulated gas supply pressure.

Install a sediment trap in the riser leading to the furnace. The trap can be installed by connecting a tee to the riser leading from the furnace. Connect a capped nipple into the lower end of the tee. The capped nipple should extend below the level of the gas controls. (See Fig. 7.)

Fig. 7—Typical Gas Pipe Arrangement

A89417

Apply joint compound (pipe dope) sparingly and only to the male threads of each joint. The compound must be resistant to the action of propane gas.

Install an accessible manual shut-off valve upstream of the furnace gas controls and within 72 in. of the furnace. A 1/8-in. NPT plugged tapping, accessible for test gage connection, must be installed immediately upstream of the gas supply connection to the furnace and downstream of the manual shut-off valve. Place ground joint union between the gas control manifold and the manual shut-off valve.

#### ⚠ WARNING

Use the proper length of pipes to avoid stress on the gas control manifold. Failure to follow this warning can cause a gas leak resulting in fire, explosion, personal injury, or death.

#### ⚠ CAUTION

Use a backup wrench when connecting the gas pipe to the furnace to avoid damaging gas controls.

Table 4—Maximum Capacity of Pipe\*

		10	20	30	40	50
