Weeding And Sowing Preface To A Science Of Mathematical Education:

Weeding and Sowing Hans Freudenthal, 1977-12-31 A title that sounds like poetry and a subtitle that seems to contradict the title But the subtitle is right and originally it was just the title A strange subtitle isn't it Preface to a Science of Mathematical Education All sciences in their prenatal stage have known this kind of literature only the term used was not Preface but for instance Prolegomena which means the same though it sounds less provisional In fact such works were thicker than the present one by up to ten times There is much more that can be said about a science before it comes into being than after with the first results comes modesty This is the preface to a book that will never be written not by me nor by anybody else Once a science of mathematical education exists it will get the preface it deserves Nevertheless this preface or what for honesty's sake I have labelled so must fulfil a function the function of accelerating the birth of a science of mathematical education which is seriously impeded by the unfounded view that such already exists Against this view I have to argue it rests on a wrong estimation both over and under estimation at the same time of what is to be considered as science

Weeding and Sowing Freudenthal H., 1976 *Fundamental Constructs in Mathematics Education* John Mason, Sue Johnston-Wilder, 2004 This book brings together a collection of classic tasks extracts and texts that have been quoted repeatedly in mathematics education literature

Proof in Mathematics Education David A. Reid, Christine Knipping, 2010-01-01 Research on teaching and learning proof and proving has expanded in recent decades This reflects the growth of mathematics education research in general but also an increased emphasis on proof in mathematics education This development is a welcome one for those interested in the topic but also poses a challenge especially to teachers and new scholars It has become more and more difficult to get an overview of the field and to identify the key concepts used in research on proof and proving

All Positive Action Starts with Criticism Sacha la Bastide-van Gemert, 2015-01-16 This study provides a historical analysis of Freudenthal's didactic ideas and his didactic career It is partly biographical but also contributes to the historiography of mathematics education and addresses closely related questions such as what is mathematics and where does it start Which role does mathematics play in society and what influence does it have on the prevailing views concerning its accompanying didactics

Hans Freudenthal 1905-1990 professor in mathematics scientist-literator but above all mathematics educator was inextricably linked to the changes which took place in mathematics education and didactics during the second half of the last century His diversity as a scientist and his inexhaustible efforts to establish the didactics of mathematics as a seriously pursued science made Freudenthal's influence in this area considerable He foresaw an essential practical role for mathematics in everyone's life encouraging students to discover and create mathematics themselves instead of imposing a ready-made mathematical system The theory of mathematics education thus developed in the Netherlands would gain world fame in the following decades Today in the light of the discussions about mathematics education in which the call for genuine mathematics instead of the so-called kindergarten mathematics can be

heard Freudenthal's approach seems to be pass. However, the outcome of this study, which is mainly based on documents from Freudenthal's vast personal archive, shows a more refined picture. The direct identification of kindergarten mathematics with Freudenthal's view on mathematics education is not justified. Realistic mathematics, as advocated by Freudenthal, includes more than just a practical introductory and should, among other things, always aim at teaching genuine mathematics in the end.

The Evolution of Research on Teaching Mathematics Agida Manizade, Nils Buchholtz, Kim Beswick, 2023-08-10

This open access book investigates current issues related to the evolution of research on teaching mathematics and examines up to thirty years of presage, process, product research (PPPR) in mathematics with respect to conceptualization, instrumentation, and design. The book discusses the theoretical and methodological challenges associated with PPPR, critically reviews current research, and explores the likely direction of further developments to identify future paths for research on high quality mathematics teaching in the digital era. Subjects that are covered in this work focus on the relationships between:

1. student learning outcomes measured upon completion of the mathematics teaching
2. student learning activities in the classroom
3. interactive mathematics teacher activities and best practices in mathematics classrooms conducted in the presence of students
4. pre/post active mathematics teacher activities such as planning, assessment, and other teaching related activities outside of the classroom
5. mathematics teachers' competencies, knowledge, and skills
6. mathematics teachers' characteristics including beliefs, attitudes, and motivation

This book discusses the evolution of such research in mathematics teaching and teacher education in the digital era and is of interest to researchers exploring the field of mathematics teaching and mathematics teacher education, as well as educators.

Approaches to Qualitative Research in Mathematics Education Angelika Bikner-Ahsbähs, Christine Knipping, Norma Presmeg, 2014-11-26

This volume documents a range of qualitative research approaches that emerged within mathematics education over the last three decades, whilst at the same time revealing their underlying methodologies. Continuing the discussion as begun in the two 2003 ZDM issues dedicated to qualitative empirical methods, this book presents a state-of-the-art overview on qualitative research in mathematics education and beyond. The structure of the book allows the reader to use it as an actual guide for the selection of an appropriate methodology on a basis of both theoretical depth and practical implications. The methods and examples illustrate how different methodologies come to life when applied to a specific question in a specific context. Many of the methodologies described are also applicable outside mathematics education, but the examples provided are chosen so as to situate the approach in a mathematical context.

Design Research in Education Arthur Bakker, 2018-07-06
