    Symbolic Computing with LISP and PROLOG Robert A. Mueller,Rex L. Page,1988-11-25 A practical introduction to symbolic computing and denotational programming First part of the book covers programming Second part addresses symbolic computing in such areas as game playing language translation and theorem proving For each topic there are example problems with proposed solutions followed by working programs using the techniques presented earlier in the text Two programs using a denotational approach accompany each of the applications in symbolic computing one in Lisp and one in Prolog   <u>Artificial Intelligence in Chemical Engineering</u> Thomas E. Quantrille,Y. A. Liu,2012-12-02 Artificial intelligence AI is the part of computer science concerned with designing intelligent computer systems systems that exhibit characteristics we associate with intelligence in human behavior This book is the first published textbook of AI in chemical engineering and provides broad and in depth coverage of AI programming AI principles expert systems and neural networks in chemical engineering This book introduces the computational means and methodologies that are used to enable computers to perform intelligent engineering tasks A key goal is to move beyond the principles of AI into its applications in chemical engineering After reading this book a chemical engineer will have a firm grounding in AI know what chemical engineering applications of AI exist today and understand the current challenges facing AI in engineering Allows the reader to learn AI quickly using inexpensive personal computers Contains a large number of illustrative examples simple exercises and complex practice problems and solutions Includes a computer diskette for an illustrated case study Demonstrates an expert system for separation synthesis EXSEP Presents a detailed review of published literature on expert systems and neural networks in chemical engineering   **Logic Programming** I. Balbin,K. Lecot,2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of SJmbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography   *Computer Integrated Manufacturing* Alan Weatherall,2013-09-03 Computer Integrated Manufacturing From Fundamentals to Implementation is based on a course in computer integrated manufacturing CIM which is part of the Production Engineering Tripos for

postgraduate level students at Cambridge University The book is intended to provide a thorough coverage of a difficult subject and to communicate principles as well as something of current practice This should give a firm basis of knowledge in CIM and develop an understanding that will be valid for many years in changing business and manufacturing environments The book covers CIM and manufacturing systems at a technical level from description of the conventional islands of computerization to the components of CIM architecture The business objectives of CIM are described from analysis of the business environment to cost justification and implementation of CIM systems CIM is seen as a business tool and not as an end in itself Each individual and company needs to adapt the tools described in this book to best effect Study of this book should enable postgraduate students and professional engineers to deal confidently with the subject and use CIM techniques profitably   International Journal of Electrical Engineering Education ,1994   **5th Conference on Automated Deduction** Wolfgang Bibel,R. Chin,1988-09-30 Any study on the historical evolution of nations and countries points out the decisive importance of productivity trends We are all very familiar with the main evolution which started with a hunting society at the dawn of civilization then moved to an agricultural society

and quickly to craftsmanship and com merce The beginning of the industrial society dates back to the end of the eighteenth century in England with the introduction of the assembly line in the textile and smelting industries However in the last few decades we are becoming more and more acutely aware of the paramount importance of the production of information Indeed according to a few economists today we should be classified as living in an information society which has superseded the industrial society At this point it simply becomes necessary to talk about the computer informa tion industry which is more and more pervading our lives from the personal computer to the workstation to information networks and electronic mail to the blueprint executed by robots to the supercomputer necessary in any major scientific and engineering task The computer has already brought about a momentous change in the production line less and less man size more and more robot size But this rush to tech nical innovation has not stopped at this point Artificial intelligence and expert systems are becoming a more and more important factor for production by many enterprises and activities **Proceedings of the National Communications Forum** ,1988
