Dominic J. Diston,2009-04-20 This first volume of Computational Modelling of Aircraft and the Environment provides a
comprehensive guide to the derivation of computational models from basic physical mathematical principles giving the
reader sufficient information to be able to represent the basic architecture of the synthetic environment Highly relevant to
practitioners it takes into account the multi disciplinary nature of the aerospace environment and the integrated nature of
the models needed to represent it Coupled with the forthcoming Volume 2 Aircraft Models and Flight Dynamics it represents
a complete reference to the modelling and simulation of aircraft and the environment All major principles with this book are
demonstrated using MATLAB and the detailed mathematics is developed progressively and fully within the context of each
individual topic area thereby rendering the comprehensive body of material digestible as an introductory level text The
author has drawn from his experience as a modelling and simulation specialist with BAE SYSTEMS along with his more
recent academic career to create a resource that will appeal to and benefit senior graduate students and industry

Simulations David Melvin Henderson,2006 This book presents a new approach to aerospace flight vehicle equations of
motion based on a unifying tensorbased formulation Covering the fundamental concepts of the geometry of space applied
mechanics and aerospace engineering analysis the author builds on these flight mechanics essentials to describe the motion
of aircraft and space vehicles Concepts are amplified by the presentation of aerospace applications in use today and that are
tied directly to the material presented The basic concepts of Cartesian analysis are developed along with the application of
tensor notation to engineering analysis Tensor notation the Einstein summation convention is introduced to give the reader
exact component equations and to demonstrate its value in multi variable analysis By applying the summation notation in the
analysis the author believes that a more complete description of the dynamic problems of aerospace vehicle motion can be
offered and that this approach is already finding applications in aerospace engineering technologies *Library Journal*
