Witczak, Roman Bielski, 2013-03-18 Lays the foundation for new methods and applications of carbohydrate click chemistry Introduced by K Barry Sharpless of The Scripps Research Institute in 2001 click chemistry mimics nature giving researchers the tools needed to generate new substances

quickly and reliably by joining small units together. With contributions from more than thirty pioneering researchers in the field this text explores the many promising applications of click chemistry in glycoscience. Readers will learn both the basic concepts of carbohydrate click chemistry as well as its many biomedical applications including synthetic antigens, analogs of cell surface receptors, immobilized enzymes, targeted drug delivery systems and multivalent cancer vaccines. *Click Chemistry in Glycoscience* examines a broad range of methodologies and strategies that have emerged from this rapidly evolving field. Each chapter describes new approaches, ideas, consequences and applications resulting from the introduction of click processes. Divided into four sections the book covers Click chemistry strategies and decoupling, Thio click chemistry of carbohydrates, Carbohydrate click chemistry for novel synthetic targets, and Carbohydrate click chemistry in biomedical sciences. Thoroughly researched the book reflects the most recent findings published in the literature. Diagrams and figures throughout the book enable readers to more easily grasp complex concepts and reaction processes. At the end of each chapter references lead to the primary literature for further investigation of individual topics. The application of click chemistry to carbohydrates has tremendous implications for research. With this book as their guide, researchers have a solid foundation from which they can develop new methods and applications of carbohydrate click chemistry including new carbohydrate based therapeutics. CA Reviews Index (CARI), 1980 Supramolecular Chemistry Peter J.

Cragg, 2010-08-26 The aim of this book is to return to the biomimicry and medicinal potential that inspired many of the early supramolecular chemists and to set it in the context of current advances in the field. Following an overview of supramolecular chemistry, the first section considers the efforts made to synthesize artificial systems that mimic biological entities. The second section addresses the application of supramolecular principles to molecular diagnostics with a particular emphasis on the receptor relay-reporter motif. Many of the examples chosen have clinical importance. The third section takes the clinical diagnostic theme further and demonstrates the therapeutic applications of supramolecular chemistry through photodynamic therapy, drug delivery and the potential for synthetic peptides to form antibiotic tubes. The short epilogue considers the potential for supramolecular solutions to be found for further challenges in biomimetic and therapeutic chemistry.
