System Level Design Methodology For Embedded Signal Processors:

System-Level Design Methodology for Embedded Signal Processors ,1997 The focus of this project was on design methodology for complex real time reactive systems where a variety of design methodologies and implementation technologies must be combined Design methodologies are encapsulated in one or more models of computation while implementation technologies are implemented as synthesis tools Applications that use more than one model of computation and or more than one synthesis tool are said to be heterogeneous Hardware software co design is one example of such heterogeneous design *Journal of VLSI Signal Processing Systems for Signal, Image, and Video Technology* ,1999

Sensors and Microsystems Piero Malcovati,Andrea Baschirotto,Arnaldo d'Amico,Corrado Natale Di,2010-03-14 Sensors and Microsystems contains a selection of papers presented at the 14th Italian conference on sensors and microsystems It provides a unique perspective on the research and development of sensors microsystems and related technologies in Italy The scientific values of the papers also offers an invaluable source to analyists intending to survey the Italian situation about sensors and microsystems In an interdisciplinary approachm many aspects of the disciplines are covered ranging from materials science chemistry applied physics electronic engineering and biotechnologies Further details of the conference and its full program at the website http www microelectronicsevents com AISEM *Specification and Design Methodology for Real-Time Embedded Systems* Randall S. Janka,2002 Specification and design methodology has seen significant growth as a research area over the last decade tracking but lagging behind VLSI design technology in general and the CAD industry in particular The commercial rush to market tries to leverage existing technology which fuels CAD design tool development Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design especially in the field of hardware software codesign It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm It was at the IEEE ACM Eighth International Symposium on Hardware Software Codesign where I met the author of this monograph Dr Randall Janka who was presenting some of his recent dissertation research results on specification and design methodology or as he has so succinctly defined this sometimes ambiguous concept the tools and rules Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so Dr Janka had developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that was implemented with embedded parallel processors **IEEE Workshop on Signal Processing Systems** ,1998 *Systematic Methodology for Real-Time Cost-Effective Mapping of Dynamic Concurrent Task-Based Systems on Heterogenous Platforms* Zhe Ma,Pol Marchal,Daniele Paolo Scarpazza,Peng Yang,Chun Wong,José Ignacio Gómez,Stefaan

Himpe,Chantal Ykman-Couvreur,Francky Catthoor,2007-08-26 A genuinely useful text that gives an overview of the state of the art in system level design trade off explorations for concurrent tasks running on embedded heterogeneous multiple processors The targeted application domain covers complex embedded real time multi media and communication applications This material is mainly based on research at IMEC and its international university network partners in this area over the last decade In all the material those in the digital signal processing industry will find here is bang up to date

etc dedicated ICs ASICs and or FPGAs memories a set of local connections between the system components and some interfaces between the system and the environment sensors actuators etc Therefore on the one hand multi processor embedded systems are capable of meeting the demand of processing power and flexibility of complex applications On the other hand such systems are very complex to design and optimize so that the design methodology plays a major role in determining the success of the products For these reasons to cope with the increasing system complexity the approaches typically used today are oriented towards co design methodologies working at the higher levels of abstraction Unfortunately such methodologies are typically customized for the specific application suffer of a lack of generality and still need a considerable effort when real size project are envisioned Therefore there is still the need for a general methodology able to support the designer during the high level steps of a co design flow enabling an effective design space exploration before tackling the low level steps and thus committing to the final technology This should prevent costly redesign loops In such a context the work described in this book composed of two parts aims at providing models methodologies and tools to support each step of the co design flow of embedded systems implemented by exploiting heterogeneous multi processor architectures mapped on distributed systems as well as fully integrated onto a single chip   Proceedings of the ... Readings in Hardware/Software Co-Design Giovanni De Micheli,Rolf Ernst,Wayne Wolf,2001-06-19 Embedded system designers are constantly looking for new tools and techniques to help satisfy the exploding demand for consumer information appliances and specialized industrial products One critical barrier to the timely release of embedded system products is integrating the design of the hardware and software systems Hardware software co design is a set of methodologies and techniques specifically created to support the concurrent design of both systems effectively reducing multiple iterations and major redesigns In addition to its critical role in the development of embedded systems many experts believe that co design will be a key design methodology for Systems on a Chip Readings in Hardware Software Co Design presents the papers that have shaped the hardware software co design field since its inception in the early 90s Field experts Giovanni De Micheli Rolf Ernst and Wayne Wolf introduce sections of the book and provide context for the paper that follow This collection provides
