### **Western Disturbances - An Indian Meteorological Perspective** A.P.

Dimri,Amulya Chevuturi,2016-02-09 This book examines the meteorological phenomenon known as Western Disturbances WDs and traces their influence on the Indian subcontinent It fully details the unique characteristics and dynamics of these disturbances which produce large scale instabilities in the atmosphere over northern India due to the orographic influence of the Himalayas The authors first present a definition of the phenomenon and then go on to detail their structure and migration Topics include dynamics energetics and thermodynamics modelling studies land use and land cover interactions and WDs in the changing climate In addition coverage outlines how WDs interact with and influence other weather systems throughout the four seasons of Indian climate winter pre monsoon monsoon and post monsoon It places special emphasis on wintertime dynamics since WDs significantly contribute to the precipitation in India during this time The authors explain why this period should be termed Indian winter monsoon and differentiate it from the northeast monsoon which so far is the prevalent term used in the region s meteorological parlance Complete with detailed illustrations and case studies this monograph will help researchers and students gain a fundamental understanding of these important storms This knowledge is essential not only for short term and seasonal hydrometeorological forecasting but also for the assessment of regional climate change and its impacts

Engineering Construction and Facilities Management domains [Tropical Cyclone Modeling and Prediction: Advances in Model Development and Its Applications](#) Xuejin Zhang, Robert Rogers, Krishna K. Osuri, Vijay Tallapragada, Zhan Zhang, 2025-06-02 Tropical cyclones TCs can cause billions of dollars in property damage and up to thousands of life losses globally every year In order to mitigate these socioeconomic impacts scientists have strived in developing sophisticated numerical modeling systems to provide better tools for research and forecast communities especially in those coastal countries and regions that are impacted substantially by TCs in the past several decades Recently several accelerated efforts were made by several research and operational centers after tremendous property and life losses by landfall TCs in the North Atlantic the Western North Pacific and the North Indian Ocean basins The modeling systems in regional forecast centers are planning to upgrade to the next generation or make significant advances through those accelerations In this Research Topic the goal is to document the latest developments physics improvements data assimilation holistic forecast systems and their applications Themes include the significant model new features high resolution physics for TC applications data assimilation methodology and observational data impacts forecast experiments model verification and validation Studies on the role of physical processes associated with the boundary layer convection and microphysics radiation land surface processes air sea wave processes are encouraged The model evaluations including quantitative precipitation forecasts and tools and products for TC research and forecasts are welcome as well Novel studies and latest model developments having a research to operation R2O transition possibility will be considered for publication The ultimate goal is to exchange research ideas advances and understanding across the global TC communities We welcome Original Research and Review Articles from development observational numerical modeling and forecasting perspectives on TCs Articles can include but are not limited to the following topics Model development TC vortex initialization algorithm High resolution physics for TC Air sea wave interactions Model tracking and intensity verification Data assimilation methods Observational data impacts Model evaluation tools Model evaluation comparison products for research and forecasts and Novel studies based on new findings and methodology **Flash Floods in Egypt** Abdelazim M. Negm, 2020-07-11 This book presents the latest findings and information on flash floods in Egypt and presents case studies from various regions throughout the country The quantitative and qualitative dimensions of these flash floods are discussed on the basis of statistical analysis and field observations The book covers a broad and diverse range of topics including evaluation of drainage basins early warning systems flash flood investigations hydrologic simulation GIS and flash floods environmental flash floods hazard management flash flood monitoring assessment of flood risks flash flood vulnerability and mitigation management of flash floods prediction and mitigation and rainfall harvesting and utilization The book offers a unique source of information on virtually all dimensions of flash floods in Egypt and their environmental impacts and combines analysis observations and experts hands on field experience It also supports the assessment and management of flash floods in Egypt a country currently facing many
