there is only one logical place to start your website Your website is you You own it You control it Any presence you build outside of your website isn't yours to keep It may be a reflection of you but when the lights go out on any entity you don't fully own or control a piece of you disappears with it What happens if Facebook cancels your account Or Twitter bans you from their platform Can you get your content back Nope It's gone forever And most of the time without an opportunity to appeal All your hard work building your web presence is wiped out with a snap of the fingers This is why you need to have a website to call home If your web host turns off the lights no problem Take your backups to a new web host and turn them back on again You control your website You and only you decide your fate This means you get to decide how deep how wide and how tall to build your web presence You can't do that with any other online platform Your website is the most critical part of building a successful and effective web presence Build a Winning Web Presence Anyone who has been involved in digital marketing for any length of time can attest that one of the most critical factors of online success is Search Engine Optimization SEO I don't care much for the term SEO because we don't optimize search engines That's what the algorithm tweakers at Google do We optimize websites It just so happens that we optimize them for search engines but we optimize them for our visitors as well I would also argue that optimizing for visitors is far more important than optimizing for Google or Bing That's not to say search engines aren't important They are However search engines are not your customers They don't buy your products or services or click on your ads people do And that makes optimizing your website for people the most important thing you can do The good news is it's not an either or situation You optimize for both search engines and visitors at the same time Great search engine optimization is just great visitor optimization If you think about it Google's only job is to provide highly relevant links to searchers based on what they are looking for Or to put it more succinctly deliver access to websites that their searchers will love Historically digital marketers have considered top rankings to be the goal of their optimization efforts That's flawed logic Rankings are not the goal they are the reward for a job well done A top search engine ranking is the trophy for having a website that your audience loves Google doesn't make the winners it simply rewards them Want to create a website that resonates One that searchers and visitors find worthwhile Then this book is for you There's not enough paper in the world to cover every aspect of website optimization Nonetheless the book you are reading is a comprehensive guide to mastering the art of website optimization I have no doubt that you will find it valuable as you push forward in your optimization efforts

Applied Sciences language English abstract Only in Germany 23 9 million of the over 14 year old german speaking population used search engines on the internet for their information search daily in 2017 Compared to 21 08 milion in 2016 this is a growth of 13 38 percent According to other studies over 85 percent of all internet sessions start with the type in into search engines Therefore Search Engine Optimization SEO offers a huge potential for companies to deliver the right information to interested users when they ask for it actively To succeed against their competitors it is important for companies to appear as high as possible in the search engine results pages SERPs The question about the most important factors to consider in SEO for good ranking positions is always highly discussed in SEO communities because Google reveals as little as possible to avoid manipulation But one thing appears to be clear because of highly developed machine learning algorithms which influence Googles valuation of a website for its ranking classical ranking factors can no longer be used as standard for every search query anymore but relevant content as well as user experience have become important

Optimization of Cooperative Banks' Websites by Application of Persuasive Methods ,2016-12-28 Bachelor Thesis from the year 2015 in the subject Business economics Offline Marketing and Online Marketing grade 2 3 University of Applied Sciences Essen

language English abstract The increasing requirements for the effectivity of a website and the more and more complex knowledge about human behavioral patterns are challenging the online presence of banks Nowadays a good usability by itself is no significant basis for decision making and the choice of a house bank Good usability is expected Rather the user experience is an essential factor for the success of a website Due to the fact that the human behavior is determined by unconscious patterns it is necessary to take these into consideration when conceptualizing a website in order to develop a user centered target oriented website design By means of persuasive design it is possible to directly address these behavioral patterns Therefore it is reasonable to optimize the user experience by the application of persuasive design methods This shall provide a motivating experience in consideration of decision making tools and motives of the user In this way it is possible to generate competitive advantage and to gain new customers as well as to boost customer loyalty Here the need for emotionalizing plays a particularly important role But especially in view of banking products it is difficult to create an emotional presentation due to the absence of haptics and because accounts are rather a functional instrument and a means to an end than a product with a high pleasure value Cooperative banks however benefit particularly from this competitive advantage Due to the cooperative idea and their values and principles they are enabled to address potential customers emotionally If values are illustrated the users have the opportunity to identify themselves with those and to align them with their own ideals
