Biofertilizers Technology S. Kannaiyan,K. Kumar,K. Govindarajan,2010-04-01 Rice based cropping system is the major cropping system practised in India which includes the rotation of crops involving rice pulses oil seeds cotton sugar cane green manures etc The rice based cropping system offers

lot of scope for the effective utilization of a wide range of biofertilizers such as Azolla BGA Azospirillum Rhizobium Gluconacetobacter diazotrophicus and other heterotrophic N₂ fixing bacteria which help to increase the yield by reducing the cost of cultivation. It thus has dual advantages of being sustainable without endangering the environment and being highly cost effective. This book *Biofertilizer Technology for Rice Based Cropping System* deals with the current developments in the basic and applied aspects of biofertilizers used in the rice based cropping including the novel endophytic diazotrophs viz Azorhizobium caulinodans Gluconacetobacter diazotrophicus Pink Pigmented Facultative Methylophs PPFM etc. The role of P, Zn and Si solubilizers in the nutrient dynamics of the rice ecosystem has also been covered. The strategies for production and distribution of quality inoculants for rice based cropping system has been given due importance with a focus on the molecular approaches for rapid and reliable quality control of biofertilizers. This book can be considered as a monograph on the usage of biofertilizers in rice based cropping system. It will be very useful for the scientists, researchers, students and extension workers involved in the management of crops in rice based cropping system.

Micronutrients: the Borderline Between Their Beneficial Role and Toxicity in Plants Antonios Chrysargyris, Monica Höfte, Nikos Tzortzakis, Spyridon Alexandros Petropoulos, Francesco Di Gioia, 2022-03-08

Beneficial Microbes Alleviate Climatic Stresses in Plants Ying Ma, Miroslav Vosátka, Helena Freitas, 2019-07-30. This Research Topic addresses the mechanisms by which beneficial soil microbes such as fungi and bacteria protect their host plant from climatic stresses that are increasing due to climate change. We will highlight 1 recent progress in fundamental research 2 applied studies aimed at promoting sustainable agriculture and environmental remediation and 3 emerging biotechnologies that promote crop adaptation to climate change. Plants respond to various climatic stresses such as drought, salinity, elevated CO₂ and extreme temperatures. These responses induce changes at the molecular, cellular and physiological levels that restrict the establishment, growth and development of the plant. Understanding these changes has become an important research goal due to concerns about the adverse effects of climatic stresses on agriculture, sustainability, global food security and even plant based remediation technologies. Some beneficial soil microorganisms such as arbuscular mycorrhizal fungi and plant growth promoting bacteria are able to protect and promote the growth of their host plants by acting as bioprotectants via induced systemic resistance, biopesticides via antibiotic functions and phytoestrogens via triggering hormonal signaling networks. Plant adaptation to various climatic stresses is dynamic and involves complex cross talk within the regulatory network e.g. transcription factors, kinase cascades and signaling molecules. However, the detailed molecular, cellular and physiological mechanisms underlying plant beneficial microbe interactions in climatic stress adaptation remain largely unknown.
