Parallel Processing and Parallel Algorithms Seyed H Roosta, 2012-12-06 Motivation It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive expansion in many areas of computer science and engineering One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available When such a system does not provide the performance requirements pipelined and parallel processing structures can be employed The concept of parallel processing is a departure from sequential processing In sequential computation one processor is involved and performs one operation at a time On the other hand in parallel computation several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing From the practical point of view this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms Parallel processing involves utilizing several factors such as parallel architectures parallel algorithms parallel programming languages and performance analysis which are strongly interrelated In general four steps are involved in performing a computational problem in parallel The first step is to understand the nature of computations in the specific application domain

Execution Support Environment Teodor Rus, Daniela Rus, 1994 **SYSTEM SOFTWARE AND SOFTWARE SYSTEMS** Concepts and Methodology is intended to offer a systematic treatment of the theory and practice of designing and implementing system software The two volumes systematically develop and apply the systems methodology for software development For that the concept of a system is analysed and various types of systems used in computer science are systematized into a concept of an ad hoc system that is suitable as a mechanism for software development The kernel of this methodology consists of a systematic approach for ad hoc systems development specification implementation validation The hardware and the software of a computer system are specified as ad hoc systems Examples from various architectures languages and operating systems are provided as illustrations Problems and their suggested solutions are provided at the end of each chapter Further readings and a list of references conclude each chapter These volumes are self contained and may be used as textbooks for an introductory course on system software and for a course on operating system However a broad spectrum of professionals in computer science will benefit from it
