The Statistical Analysis Of Recurrent Events:

The Statistical Analysis of Recurrent Events Richard J. Cook, Jerald Lawless, 2007-07-16 This book presents models and statistical methods for the analysis of recurrent event data. The authors provide broad detailed coverage of the major approaches to analysis while emphasizing the modeling assumptions that they are based on. More general intensity based models are also considered as well as simpler models that focus on rate or mean functions. Parametric, nonparametric and semiparametric methodologies are all covered with procedures for estimation, testing and model checking.

The Statistical Analysis of Recurrent Events Richard J. Cook, Jerald Lawless, 2008-11-01 This book presents models and statistical methods for the analysis of recurrent event data. More general intensity based models are also considered as well as simpler models that focus on rate or mean functions. Statistical Analysis of Panel Count Data Jianguo Sun, Xingqiu Zhao, 2013-10-09 Panel count data occur in studies that concern recurrent events or event history studies when study subjects are observed only at discrete time points. By recurrent events we mean the event that can occur or happen multiple times or repeatedly. Examples of recurrent events include disease infections, hospitalizations in medical studies, warranty claims of automobiles or system break downs in reliability studies. In fact, many other fields yield event history data too such as demographic studies, economic studies and social sciences. For the cases where the study subjects are observed continuously, the resulting data are usually referred to as recurrent event data. This book collects and unifies statistical models and methods that have been developed for analyzing panel count data. It provides the first comprehensive coverage of the topic. The main focus is on methodology but for the benefit of the reader, the applications of the methods to real data are also discussed along with numerical calculations. There exists a great deal of literature on the analysis of recurrent event data. This book fills the void in the literature on the analysis of panel count data. This book provides an up to date reference for scientists who are conducting research on the analysis of panel count data. It will also be instructional for those who need to analyze panel count data to answer substantive research questions. In addition, it can be used as a text for a graduate course in statistics or biostatistics that assumes a basic knowledge of probability and statistics.

[Statistical Analysis of Recurrent Events by Point Process](#) Gyeongtae Hong, 2019 [The Statistical Analysis of Multivariate Failure Time Data](#) Ross L. Prentice, Shanshan Zhao, 2019-05-14 The Statistical Analysis of Multivariate Failure Time Data: A Marginal Modeling Approach provides an innovative look at methods for the analysis of correlated failure times. The focus is on the use of marginal single and marginal double failure hazard rate estimators for the extraction of regression information. For example, in a context of randomized trial or cohort studies the results go beyond that obtained by analyzing each failure time outcome in a univariate fashion. The book is addressed to researchers, practitioners and graduate students.

and can be used as a reference or as a graduate course text. Much of the literature on the analysis of censored correlated failure time data uses frailty or copula models to allow for residual dependencies among failure times given covariates. In contrast this book provides a detailed account of recently developed methods for the simultaneous estimation of marginal single and dual outcome hazard rate regression parameters with emphasis on multiplicative Cox models. Illustrations are provided of the utility of these methods using Women's Health Initiative randomized controlled trial data of menopausal hormones and of a low fat dietary pattern intervention. As byproducts these methods provide flexible semiparametric estimators of pairwise bivariate survivor functions at specified covariate histories as well as semiparametric estimators of cross ratio and concordance functions given covariates. The presentation also describes how these innovative methods may extend to handle issues of dependent censoring, missing and mismeasured covariates and joint modeling of failure times and covariates setting the stage for additional theoretical and applied developments. This book extends and continues the style of the classic Statistical Analysis of Failure Time Data by Kalbfleisch and Prentice. Ross L. Prentice is Professor of Biostatistics at the Fred Hutchinson Cancer Research Center and University of Washington in Seattle, Washington. He is the recipient of COPSS Presidents and Fisher awards, the AACR Epidemiology Prevention and Team Science awards and is a member of the National Academy of Medicine. Shanshan Zhao is a Principal Investigator at the National Institute of Environmental Health Sciences in Research Triangle Park, North Carolina.

Interdisciplinary Bayesian Statistics Adriano Polpo, Francisco Louzada, Laura L. Rifo, Julio M. Stern, Marcelo Lauretto, 2015-02-25

Through refereed papers this volume focuses on the foundations of the Bayesian paradigm, their comparison to objectivistic or frequentist Statistics counterparts and the appropriate application of Bayesian foundations. This research in Bayesian Statistics is applicable to data analysis in biostatistics, clinical trials, law, engineering and the social sciences. EBEB, the Brazilian Meeting on Bayesian Statistics, is held every two years by the ISBrA, the International Society for Bayesian Analysis, one of the most active chapters of the ISBA. The 12th meeting took place March 10-14, 2014 in Atibaia. Interest in foundations of inductive Statistics has grown recently in accordance with the increasing availability of Bayesian methodological alternatives. Scientists need to deal with the ever more difficult choice of the optimal method to apply to their problem. This volume shows how Bayes can be the answer. The examination and discussion on the foundations work towards the goal of proper application of Bayesian methods by the scientific community. Individual papers range in focus from posterior distributions for non dominated models to combining optimization and randomization approaches for the design of clinical trials and classification of archaeological fragments with Bayesian networks.

Encyclopedia of Medical Decision Making Michael W. Kattan, 2009-08-15

Decision making is a critical element in the field of medicine that can lead to life or death outcomes yet it is an element fraught with complex and conflicting variables. Diagnostic and therapeutic uncertainties, patient preferences and values and costs. Together decisions made by physicians, patients, insurers and policymakers determine the quality of health care quality that depends inherently

on counterbalancing risks and benefits and competing objectives such as maximizing life expectancy versus optimizing quality of life or quality of care versus economic realities Broadly speaking concepts in medical decision making MDM may be divided into two major categories prescriptive and descriptive Work in the area of prescriptive MDM investigates how medical decisions should be done using complicated analyses and algorithms to determine cost effectiveness measures prediction methods and so on In contrast descriptive MDM studies how decisions actually are made involving human judgment biases social influences patient factors and so on The Encyclopedia of Medical Decision Making gives a gentle introduction to both categories revealing how medical and healthcare decisions are actually made and constrained and how physician healthcare management and patient decision making can be improved to optimize health outcomes Key Features Discusses very general issues that span many aspects of MDM including bioethics health policy and economics disaster simulation modeling medical informatics the psychology of decision making shared and team medical decision making social moral and religious factors end of life decision making assessing patient preference and patient adherence and more Incorporates both quantity and quality of life in optimizing a medical decision Considers characteristics of the decisionmaker and how those characteristics influence their decisions Presents outcome measures to judge the quality or impact of a medical decision Examines some of the more commonly encountered biostatistical methods used in prescriptive decision making Provides utility assessment techniques that facilitate quantitative medical decision making Addresses the many different assumption perspectives the decision maker might choose from when trying to optimize a decision Offers mechanisms for defining MDM algorithms With comprehensive and authoritative coverage by experts in the fields of medicine decision science and cognitive psychology and healthcare management this two volume Encyclopedia is a must have resource for any academic library

Estimands in Clinical Trials

Jiawei Wei, Leslie Meng, Frank Bretz, Feng Chen, Jun Wang, 2026-01-01 This book provides a comprehensive up to date and practical introduction to the estimand framework and its application in clinical trials Since its introduction by the International Council for Harmonisation ICH through the E9 R1 guideline in 2019 the estimand framework has led to a significant shift in the design conduct analysis and interpretation of clinical trials By explicitly aligning trial objectives with the clinical question of interest and by carefully accounting for intercurrent events the framework facilitates greater transparency and interpretability of trial results In recent years its adoption has supported improved scientific and regulatory dialogue more targeted trial designs and analysis methods and a better understanding of treatment effects across drug development programs This book reflects both the conceptual underpinnings of the estimand framework and the growing body of experience gained by the scientific and regulatory community since the release of the ICH E9 R1 guideline Emphasis is placed on practical implementation across a wide range of clinical and therapeutic settings Part I introduces the core concepts of the framework and offers detailed guidance on how to describe estimands in clinical trial protocols and related documents Part II presents a wide range of case

studies from various therapeutic areas to support practical implementation Part III summarizes estimand related content from regulatory guidelines across different indications Part IV describes statistical analysis methods and approaches for handling missing data across continuous binary recurrent and time to event endpoints Part V explores the use of the estimand framework in a variety of clinical trial settings Designed for a broad audience of professionals and students involved in clinical research this book will be particularly valuable for those engaged in the design conduct and analysis of clinical trials across the drug development lifecycle It serves both as a structured introduction for those new to the field and a detailed reference for experienced professionals Whether for academic study or practical implementation this book is an essential resource for advancing the estimand framework and promoting more robust informative clinical trials

Melnick,Brian Everitt,2008 **Statistica Sinica** ,2002 **The Statistical Analysis of Series of Events** David Roxbee Cox,Peter A. W. Lewis,1966 **Statistical Methods for Recurrent Events and First Non-fatal Events in Clinical Trials** Jiren Sun,2025 This dissertation addresses four statistical questions related to the analysis of first non fatal events and recurrent events non fatal events that occur repeatedly within the same subject in clinical trials and develops four corresponding statistical methods In the first project we investigate the question How can we quantify the difference between the commonly reported cause specific hazard ratio CSHR and the direct effect of treatment on the underlying first non fatal event process in the presence of death To answer this we introduce the Proportional Principal Stratum Hazards PPSH model within the principal stratification framework The PPSH model estimates the principal stratum hazard ratio PSHR which reflects the direct effect on the underlying first non fatal event process assuming correct model specification By reporting the PSHR alongside the CSHR researchers can gain a more comprehensive understanding of the direct effect on the underlying first non fatal event process In the second project we address the question How can we improve the precision

of area under the curve estimation for the mean cumulative function while preserving its unconditional interpretability To this end we propose a nonparametric covariate adjustment approach that ensures efficiency gains over unadjusted analyses and applies universally to various randomization schemes including both simple and covariate adaptive designs In the third project we explore the question How can we estimate treatment effects under a hypothetical scenario where the intercurrent event post randomization events affecting outcome interpretation or existence does not occur We apply inverse probability weighting to the widely used Lin Wei Yang Ying and negative binomial models appropriately adjusting for baseline and internal time varying covariates to obtain unbiased estimates of hypothetical treatment effects Simulation studies demonstrate that our approach outperforms alternative analytical methods in terms of bias and power In the final project we examine the question How can we estimate treatment effects on recurrent events and recover the underlying trajectory of recurrent events in the presence of death We propose a parametric shared frailty model that enables formal testing of recurrent event trends and offers greater power than traditional time to first event analyses in heterogeneous clinical trial populations [Encyclopedia of Statistics in Quality and Reliability](#) Fabrizio Ruggeri,Ron S.
