Open Source Software: New Horizons Pär J. Ågerfalk, Cornelia Boldyreff, Jesús M. González-Barahona, Gregory R. Madey, John Noll, 2010-05-10 This book constitutes the refereed proceedings of the 6th International IFIP WG 2.13 Conference on Open Source Systems OSS 2010 held in Notre Dame IN USA in May/June 2010. The 23 revised full papers presented together with 17 short papers, 5 workshop abstracts and 4 panel descriptions were carefully reviewed and selected from 51 submissions. The papers reflect the international communities of active OSS researchers and present a broad range of perspectives on open source systems ranging from software engineering through organizational issues to law. *Airloads on Bluff Bodies, with Application to the Rotor-induced Downloads on Tilt-rotor Aircraft*, 1983 The aerodynamic characteristics of airfoils with several flap configurations have been studied theoretically and experimentally in an environment that simulates a wing immersed in the downwash of a hovering rotor. Special techniques have been developed for correcting and validating the wind tunnel data for large blockage effects and the test results have been used to evaluate two modern computational aerodynamics codes. The combined computed and measured results show that improved flap and leading edge configurations can be designed which will achieve large reductions in the downloads of tilt rotor aircraft and thereby improve their hover efficiency.
