

6 ZR320 Controller Programming

6.1 Overview

This section contains information and procedures that allow the technician to program the ZR320 controller.

You can program the ZR320 controller in the following ways:

- ❑ with a Motorola RIII-compatible interface, using a computer running Motorola CMC300/ACS300 Radio Service Software (RSS)
- ❑ DTMF over the radio channel ("over-the-air") from a radio, base station, or hand-held radio
- ❑ DTMF from a remote telephone, connected through the telephone company central office or a PEO to the Phone jack on the rear of the ZR320 controller
- ❑ remotely, through the ZR320 controller.

6.2 User Equipment Type

The ZR320 controller has the capacity for 100 users numbered from 00 to 99. Each user can be programmed to operate on a certain equipment type (i.e. TPL radio, QCII pager, etc.). When a user does not have an equipment type programmed, that user is considered inactive and is not allowed to place or receive calls. The equipment type determines how a user functions and what type of selective signalling is used to notify that user when a call is coming in. It only determines the type of selective signalling, i.e. TPL, DPL, QCII, or none; it does not determine the actual tones used to signal the radio. These tones are designated by the user number.

6.2.1 TPL User

When a user has an equipment type of TPL mobile or TPL talkback pager, the user number selects the tone. Refer to Table 3-1 on pages 3-2 and 3-3 for the tones assigned to each user number. For example, user number 01 encodes 67.0 Hz. This means that you must consider which user number will encode the correct tone, instead of which tone to assign to a user number. The user number with the desired tone becomes the one you will choose. User numbers 00 and 51-99 do not encode any TPL tone; they can be used for carrier squelch only TPL users.

6.2.2 DPL User

When a user has an equipment type of DPL mobile or DPL talkback pager, the user number selects the DPL code. Refer to Table 6-1 for the codes assigned to each user number. Note that user number 00 is not carrier squelch as in the case of TPL. In this case, the user number you choose will properly encode the correct DPL code.
