Smarter Notes 9 Steps To Highly Effective Study Notes:

Smarter Notes Richard Glenn, 2015-04-11 Does taking notes feel like herding cats It did to me I was THAT guy You know the one The guy frantically trying to write down every single little thing the professor said I was absolutely terrified of missing even the smallest thing What if it was on the test What if I needed it for a paper What if there was a pop quiz What if I was studying and couldn't remember something I was that guy And to me every class period felt like a desperate attempt to write down everything I was hearing instead of anything even remotely close to learning I literally felt like I was a court reporter trying frantically to organize all the facts as they were being thrown at me 100mph And it was very very stressful not to mention a great way to get early onset carpal tunnel syndrome It wasn't until much later that I realized something I wasn't taking notes I was transcribing my classes And let me tell you when you're preparing for a test having a great organized set of notes is much much more useful than having dozens of pages of transcribed lectures by an order of magnitude So I set out to do what I did with every area of my study habits around that time develop a great system And honestly it wasn't that easy I knew how to write papers pretty well And I could read okay But taking notes was a totally different beast There are just so many skills involved listening organizing mental information memory speed writing asking good question and quite a few more So it took me a while In the end though I landed on a set of techniques that helped me take ultra efficient notes and drastically increase my grades Later when I was actually TEACHING college classes I passed these same techniques along to my students which by the way was when I really figured out that taking notes was a major pain point for a lot of people So I figured it'd be a good subject for a book which is what you're looking at now Here's what you'll learn All about the Great Note Taking Myth and why it's a load of crap How to leverage the 5 most popular note taking systems How to deploy memory hacks to your advantage How to tailor your notes to your specific learning style How to properly execute pre note preparation strategies How to actually put that pen to paper and knock out some great notes How to review your notes and what exactly to look for when you do How to use your notes to ace exams How to use your notes to write killer papers And more

Hodges, 2023-07-03

This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i.e. can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the

research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching
