Zero Syntax Zero Syntax:

Zero Syntax David Michael Pesetsky, 1996 The analysis and theory developed in Zero Syntax is an important contribution to the understanding of Universal Grammar The overriding theme is the notion that the availability and syntactic positioning of arguments is not a matter of chance but arises from laws governing the structure of lexical entries and from laws governing syntactic structures themselves Along the way Zero Syntax also examines issues of broad significance to current theoretical linguistic research in syntax and lexical semantics Zero Syntax develops two main topics a simple view of syntactic linking regularities that it defends in the domain of Experiencer predicates predicates such as annoy and a theory of syntactic constituency that involves two parallel modes of structural organization one of which is the Cascade syntax The theme that ties these issues together is the supposition that phonologically null zero morphology is present in structure detectable through its syntactic and morphological consequences The arguments in Zero Syntax will be relevant to debates about such issues as empty elements in syntax and morphology whether syntactic structures should be binary branching the structure of double object constructions and whether verbs have multiple meanings related by lexical rules or abstract general meanings that are ambiguated in particular constructions Current Studies in Linguistics No 27 **The Scheme**

Michael Sperber, 2009 A series of reports describing the innovative programming language Scheme *Syntactic Aspects of Topic and Comment* André Meinunger, 2000-10-20 The book focuses on the syntactic behavior of argument noun phrases depending on their discourse status The main language of consideration is German but it is shown that the observations can be carried over to other languages The claim is that discourse new arguments remain inside the VP where they are base generated The hierarchy of argument projection is claimed to be fix within and across languages With the major attention to direct objects it is then argued that discourse old here called topical noun phrases undergo raising to agreement projections This movement can be realized differently scrambling object agreement clitic doubling differences in morphological case and stress pattern turn out to be analyzable as one underlying phenomenon It is furthermore shown that many so called subject object asymmetries boil down to topic non topic differences for example with respect to extraction Thus irrespectively of the argumental status discourse new constituents do not act as barriers whereas topical arguments create weak islands
