Powell, 2013-09-30 Code for most web sites mostly runs on the server When a user clicks on a link the site reacts slowly because the browser sends information to the server and the server sends it back again before displaying the results With near universal availability of capable browsers and powerful hardware the single page web application SPA pushes most of the code to the browser giving users immediate results whether they're surfing at their desk or using a phone app Single Page Web Applications shows how to build modern browser based apps that take advantage of stronger client platforms and more predictable bandwidth It covers the SPA design approach and explores new techniques like structured JavaScript and responsive design Readers will learn to capitalize on trends like server side JavaScript and NoSQL data stores as well as new frameworks that make JavaScript more manageable and testable as a first class language AUDIENCE This book is for web developers architects and product managers who know about JavaScript HTML CSS and web development basics ABOUT THE TECHNOLOGY A Single Page Application SPA is an application delivered to the browser that does not reload the page during use **Building Single Page Web Apps with AngularJS** Raoni Boaventura, 2014 A practical comprehensive guide on AngularJS taking you from the basics to rich client side applications in no time About This Video Learn how to build single page applications from scratch with a practical approach to development using AngularJS Go from Hello World to intricate web applications with incrementally complex exercises Learn all about the important features and components available in the framework including how to write your own custom components In Detail Building web applications that can manage huge chunks of data consistently is becoming increasingly difficult and this affects the efficiency of your app Single Page Applications SPA solve this issue as its design principles make life easy for data intensive applications by updating the constant stream of data in the same page making the application more intuitive for the user Doing this with pure JavaScript is hard To help with the implementation of single page applications Google developed a framework called AngularJS that allows you to build well structured easily testable and maintainable frontend Single Page Applications This course will take you from the very basics of developing rich client side Single Page Applications SPA

and Testing of Ajax-based Single-page Web Applications Ali Mesbah,2009 Single Page Applications Raphaël Vercruyssen,2013 In deze scriptie wordt het onderwerp Single Page Application SPA beschreven Een Single Page Application is de combinatie van het beste van een web app en een desktop application Bij een web app is er geen installatie vereist en je moet nooit een update doen als gebruiker Bij een desktop applicatie heb je het voordeel dat alles zeer snel en snappy verloopt doordat al je data op het device zit Een Single Page Application tracht dus een applicatie te zijn die in de browser draait maar met offline storage Dit kon vroeger niet bereikt worden maar sinds de komst van de HTML5 standaard hebben moderne browsers lokale opslag ter beschikking Om data op te halen wordt er gebruik gemaakt van de AJAX techniek zodat de pagina niet volledig hoeft te herladen voordat je de inhoud kan zien Zoals de naam het al zegt is dit een applicatie met slechts n html pagina Bij een Single Page App heb je de keuze om al je html in n bestand te steken of om te opteren voor templates Indien je kiest voor het gebruiken van templates verminder je de digitale voetafdruk van je index pagina heel wat Zeker als je gebruik maakt van veel verschillende pagina s zal je er dus voordeel aan doen om een templating engine te gebruiken Er bestaan een aantal verschillende types zoals jQuery templating engine maar aangezien in deze scriptie het MVVM framework knockoutJS wordt besproken zullen we gebruik maken van de templating engine ontworpen door Jim Cowart namelijk Knockout js External Template Engine Naast het eerder vermelde KnockoutJS worden ook AmplifyJS en SammyJS besproken Dit zijn beide zeer handige frameworks voor het opbouwen van een SPA Amplify gebruiken we voor het ophalen van data via AJAX Het maakt ook het gebruik van web storage zeer gemakkelijk Indien de browser van de gebruiker geen HTML5 web storage ondersteunt maakt hij gebruik van andere technologie n om hetzelfde effect te bereiken Sammy wordt gebruikt om de hash routing te regelen en het maakt Server-Driven Web Apps with Htmx R. HTTP responses Add interactivity with JavaScript and libraries such as Alpine and _hyperscript Make your apps more secure by escaping user supplied content and specifying a Content Security Policy Go beyond basic HTTP requests with WebSockets and server sent events The htmx JavaScript library gives you a new way to craft web applications The htmx approach differs significantly from that of the currently popular single page application SPA frameworks rather than write a bunch of JavaScript you simply annotate HTML elements before you send them to the browser The resulting code is easier to understand and modify and because it downloads less to the browser and doesn't need JSON creation and parsing you'll find it performs better too Rethink web application design write code in any language that simply responds to requests with htmx snippets Dynamically update portions of the current web page directly from the server Implement common patterns such as lazy loading input validation CSS transitions active search optimistic updates pagination infinite scroll polling and click to edit Add interactivity with JavaScript and libraries such as Alpine and _hyperscript Use the htmx JavaScript API to simplify DOM operations Make your web apps more secure escape user supplied content use Subresource Integrity hashes and enforce a Content Security Policy Go beyond the basic HTTP request response pattern with WebSockets and server sent events Discover a simpler way to implement web applications that emphasizes web fundamentals What You Need A modern web browser and the ability to build and run a local HTTP server using the server side language and framework of your choice The code examples are fully compatible with htmx 2.0 [Single-Page Web-Apps](#) Heiko Spindler, 2014
