Sistemas expertos. Representacion e inferencia. Problemas resueltos / Expert systems. Representation and inference. Resolved Issues Alberto Fernández Gil, 2010-11 Este libro recoge una colección de problemas sobre diversas técnicas de representación del conocimiento utilizadas en la construcción de sistemas expertos o basados en el conocimiento. Cada problema incluye una solución al mismo haciendo de este libro un material de estudio excelente para consolidar los conocimientos teóricos recibidos en cualquier curso sobre sistemas expertos o ingeniería del conocimiento. El libro se divide en varios capítulos cada uno dedicado a un modelo de representación del conocimiento particular. En particular se incluyen problemas sobre sistemas basados en reglas utilizando el lenguaje CLIPS, redes semánticas, lógicas de descripciones, manejo de incertidumbre, modelo MICIN, redes bayesianas, lógica borrosa, tests de autocomprobación.

Métodos de resolución de problemas: Aplicación al diseño de sistemas inteligentes Martín Molina, 2006-09-01 Desde que en 1982 Allen Newell publicó su artículo que sentaba las bases de la necesidad de un nivel adicional para el análisis y descripción del conocimiento de sistemas inteligentes se han sucedido avances importantes en la forma de concebir y diseñar este tipo de sistemas. Dos aspectos destacan entre los resultados más interesantes de la investigación en la década de los 90 en el campo de la ingeniería del conocimiento. Por un lado se ha profundizado en el conocimiento sobre cómo las personas resuelven problemas. Esto se ha logrado por la vía empírica mediante un trabajo científico de observación, experimentación y generalización. Por otro lado como logro adicional en este campo de investigación se ha creado un nuevo lenguaje descriptivo como complemento a las formas de representación tradicionales. Dicho lenguaje que ha sido aceptado por un amplio número de autores se sitúa en un mayor nivel de abstracción y permite la formulación de arquitecturas más complejas de sistemas basados en el conocimiento. El propósito principal del presente texto es servir de base como fuente de información de ambos aspectos recientes del campo de la ingeniería del conocimiento. El texto está dirigido a profesionales y estudiantes del campo de la informática que conocen técnicas básicas tradicionales de representación del conocimiento. La redacción del presente texto se ha orientado en primer lugar para recopilar y uniformizar la descripción de métodos existentes en la literatura de ingeniería de conocimiento. Se ha elegido un conjunto de métodos representativo en este campo que no cubre la totalidad de los métodos existentes pero sí los más conocidos y utilizados en ingeniería del conocimiento presentando una descripción detallada de carácter tanto teórico como práctico. El texto describe cada método utilizando una notación común a todos ellos parcialmente basada en los estándares descriptivos seguidos por las metodologías más extendidas. Para cada método se incluyen algoritmos definidos de forma expresa para el presente texto con ejemplos detallados de operación. Ambos aspectos, la uniformización junto a la presentación detallada de la operación, suponen una novedad interesante respecto al estado actual de la literatura sobre este campo lo que hace el texto muy adecuado para ser utilizado como libro de consulta como apoyo en la docencia de la asignatura de construcción de sistemas inteligentes.
