Sister Nancy Fundamentals Nursing:

Nursing Foundation Procedure Ms. Aakanksha, M. Amala Seeli, Ms. Dharini Parmar, Mrs. Neelofur Ibran Ali, Mrs. Shikha Gupta, 2023-08-10 Nurses are critical in the delivery of essential health services and are core in strengthening the health system. They bring people-centred care closer to the communities where they are needed most, thereby helping improve health outcomes and the overall cost effectiveness of services. Communication skills for nurses are essential but may be difficult to master. Communication is the exchange of information between people by sending and receiving it through speaking, writing or by using any other medium. Nurses speak to people of varying educational, cultural and social backgrounds and must do so in an effective, caring and professional manner, especially when communicating with patients and their families. The quality of communication in interactions between nurses and patients has a major influence on patient outcomes. This influence can play a very important role in areas such as patient health education and adherence. Therapeutic and non-therapeutic communication in nursing are opposites of one another. Therapeutic nursing communication promotes good nurse-patient relationships and can help improve patient satisfaction and outcomes. Therapeutic communication in nursing can lead to a deeper insight into the patient's ability to care for himself, his perception of the reality of his health situation and any other issues that need to be addressed. Conversely, non-therapeutic communication can lead to miscommunication between the nurse, patient and other healthcare team members. Non-therapeutic communication in nursing can hinder effective patient care, lead to errors or omissions in care and have legal consequences if the patient is injured as a result of poor communication. *A COMPREHENSIVE MANUAL OF NURSING FOUNDATION PROCEDURES*

Dr. Anita Prakasam, Prof. Rajesh P. Joseph, Dr. Suresh V, Dr. Vruti Patel, Ms. Sonal Patel, 2023-12-30 Oxygen therapy administration is a fundamental aspect of nursing care aimed at providing supplemental oxygen to patients experiencing respiratory distress or inadequate oxygenation. As an essential component in managing various health conditions such as chronic obstructive pulmonary disease (COPD), pneumonia or acute respiratory failure, nurses play a pivotal role in assessing, implementing and monitoring the delivery of oxygen therapy. In all health care settings, assessing patient health is a deliberate and ongoing effort. The importance of routine health assessment has increased along with the emphasis on prevention. The choice of therapies the client receives and the assessment of how well those therapies work depend on how accurately the nurse's assessment. When the nurse conducts ongoing goals and thorough assessments, the continuity of the patient's medical care improves. Palpation is an assessment technique in which the examiner feels with his/her fingers and one or both hands. Skill and gentleness are important. It reveals any swelling, coldness, hotness, stiffness, hardness, smoothness, roughness, pain, vibration, firmness and flaccidity. The following points are to be kept in mind while doing palpation:
