## **Science Experiments Latest Iphone 2025:**

**Value Co-Creation in Web 3.0** Robin Qiu,2026-01-01 This book explores the architecture and framework for co creating the most valuable and promising data in the future Internet often referred to as Web 3.0 from the end user's perspective. Unlike the current platform economy where user's daily usage and activity data is predominantly held by individual organizations, Web 3.0 advocates for decentralized data management across interconnected platforms. This approach aims to fully utilize the vast amounts of data generated by the increasingly connected physical world. The book explains how Web 3.0 can be developed with fundamental and technological support to enhance decentralized data management and maximize benefits for end users. Additionally, it presents two use cases to illustrate how value co creation can be achieved using Web 3.0. The book is aimed primarily at students from business and engineering schools. It also serves as a valuable teaching resource for instructors in management information systems, MIS, information systems, information science and technology, and data and computing sciences. Additionally, professionals interested in digital transformation, blockchain technology, data analytics, AI, and digital economy policymaking will find it highly relevant.

**Ice Worlds of the Solar System** Michael Carroll,2019-10-23 Although there is a chance that certain planets may be habitable for life, the moons of planets might have even more to offer. The icy moons of Jupiter, Saturn, Uranus, and Neptune have taught us important lessons about new volcanic forms, cryovolcanism, and the bizarre landscapes sculpted by those erupting geysers. Glaciers, ice mountains, and vast canyons mold the faces of these worlds of ice and thunder. Yet many ice moons and dwarf planets, including Ceres and Pluto, are in fact sea worlds, hiding deep oceans beneath their ice crusts. This book explores the frozen worlds beyond Mars, delving into the interior forces of migrating ice diapirs, seafloor volcanism, and tidal friction, which help form the landscapes found above and biologically friendly environs buried below. It covers the latest research in the field and includes interviews with today's foremost authorities, including astrobiologists Chris McKay, NASA Ames, Ralph Lorenz, Johns Hopkins Applied Physics Laboratory, and Karl Mitchell, Jet Propulsion Laboratory. Original art by the author enhances the concepts explored in the text, recreating some of the most remarkable landscapes on icy planets and moons.

**Superconvergence** Jamie Metzl,2024-06-11 From a leading futurist and OneShared World founder, a brilliant book that explores how artificial intelligence and other revolutionary technologies are transforming our lives and our future. Sanjay Gupta, New technologies have the potential to improve our health, feed billions of people, supercharge our economies, store essential information for millions of years, and save our planet. But if we're not careful, they can also do immeasurable harm. Luckily, in Jamie Metzl, we have a leading expert who integrates science, technology, history, politics, and international affairs to envision a future that most specialists almost by definition cannot see. In this bold and inspiring exploration of transformative human knowledge, Metzl gives us the definitive account of the technological precipice on which we stand and the map to where we go from here.
