Prevention Targeting Mental Health and

Nonsuicidal Self-injury in Adolescents Erik Aspeqvist, 2025-05-07 Adolescent mental health is today a topic raising great concern and reports of rising rates of mental health problems have led some to call the situation a mental health crisis In parallel with this there has been a realization that nonsuicidal self injury NSSI is something affecting an increasingly large share of adolescents The fact that resources are limited together with the knowledge of the burden of mental health problems have spurred a great interest in prevention Schools are seen as arenas with great potential for deploying preventive interventions targeting adolescents The available evidence for such interventions is however limited and there is a need to better understand how they could be more effective The present thesis aims to contribute to the scientific knowledge about school based mental health prevention by investigating the effects of a whole school prevention program to explore adolescents experiences of taking part in such a program and to shed light on heterogeneity among adolescents with a history of NSSI as well as mechanisms underlying engagement in NSSI In Study I the aim was to investigate emotion regulation and trauma symptoms as potential mediators of the association between childhood abuse and NSSI In a sample N 3 169 of data from community adolescents mediation was investigated using structural equation modeling Both emotion regulation and trauma symptoms were found to partly mediate the relationship between childhood abuse and NSSI and together to mediate this association completely Study conclusions were that emotion regulation and trauma symptoms seem to be what drives NSSI rather than experiences of childhood abuse themselves Study II aimed to investigate characteristics of the subgroups of adolescents acknowledging NSSI when answering a dichotomous yes no question versus a checklist with NSSI behaviors in a sample N 266 of community adolescents These groups were found to be large and to differ from each other in several respects with implications both in clinical and research settings Further cluster analysis was employed in order to identify subgroups among adolescents with NSSI and finding such subgroups to be different from each other it was

concluded that there was a need for greater awareness of the heterogeneity within NSSI In Study III the effects of a whole school preventive intervention were evaluated in longitudinal data from the same sample as in Study II N 183 with complete data from three points of measurement harnessing the cluster randomized controlled design of the overall project Effects were found on NSSI frequency which decreased at post intervention and on Stigma Awareness which increased Conclusions of Study III was that a whole school preventive intervention can be effective in reducing NSSI frequency and in increasing adolescents awareness of mental health stigma Study IV was a qualitative group interview study employing thematic analysis in order to explore adolescents experiences of taking part in the whole school preventive intervention as well as their perspectives on mental health Key findings were the identification of a autonomy help seeking dilemma and the perceived need of interventions targeting mental health among adolescents In conclusion the present thesis adds to the knowledge about prevention targeting NSSI and mental health among adolescents by documenting effects of a whole school prevention program Further the thesis provides insights related to school based prevention including adolescents experiences information on NSSI measurement and subgroups among individuals with a history of NSSI Ungdomars psykiska hlsa r idag ett mne som vcker stor oro och rapporter om stigande f r komst av psykiska problem har f tt somliga att kalla situationen f r en psykisk hlsokris Parallelt med detta har det vuxit fram en insikt om att icke suicidalt sjlvskadebeteende eng nonsuicidal self injury NSSI r n got som drabbar en allt st rre andel ungdomar De begrnsade resurserna tillsammans med kunskapen om b rden av psykiska problem har lett till ett stort intresse f r f rebyggande tg rder Skolor ses som arenor med stor potential f r f rebyggande insatser riktade till ungdomar Evidensen f r s dana insatser r dock begrnsad och det finns ett behov av att b ttre f rst hur de kan bli mer effektiva Denna avhandling syftar till att bidra till den vetenskapliga kunskapen om skolbaserad psykisk hlsoprevention genom att underska effekterna av ett skol vergripande preventionsprogram eng whole school prevention program utforska ungdomars erfarenheter av att delta i ett s dant program och att belysa heterogenitet bland ungdomar med en historia av sjlvskadebeteende samt mekanismer bakom sjlvskadebeteende I Studie I var syftet att underska emotionsreglering och traumasymptom som potentiella mediatorer av sambandet mellan vergrepp i barndomen och sjlvskadebeteende I ett urval N 3169 av data fr n ungdomar undersktes mediation med hjlp av strukturell ekvationsmodellering B de emotionsreglering och traumasymptom visade sig delvis mediera sambandet mellan barndomsmiss handel och sjlvskadebeteende och tillsammans mediera de b da faktorerna detta samband fullst ndigt Studiens slutsatser var att emotionsreglering och traumasymptom verkar vara det som driver sjlvskadebeteende snarare n sjlv erfarenheterna av vergrepp Studie II syftade till att underska egenskaper hos de undergrupper av ungdomar som indikerar sjlvskadebeteende genom svar p en dikotom ja nej fr ga j mf rt med en checklista med sjlvskadebeteenden i ett urval N 266 av ungdomar Dessa grupper visade sig vara stora och skilja sig fr n varandra i flera avseenden med implikationer b de i kliniska och forskningssammanhang Vidare anvndes klusteranalys f r att identifiera undergrupper bland ungdomar med sj

lvskadebeteende och eftersom det visade sig att sdana undergrupper skilde sig från varandra var en slutsats att det finns ett behov av att röra medvetenhet om heterogeniteten inom självskadebeteende I Studie III utvärderades effekterna av den skolvergripande preventiva insatsen med hjälp av longitudinella data från samma urval som i studie II N 183 med fullständiga data från tre års punkter och genom den klusterrandomiserade kontrollerade designen hos det vergripande projektet Effekter observerades på frekvens av självskadebeteende som minskade efter interventionen och på medvetenhet om stigma som kunde. Viktiga slutsatser från Studie III var att en skolvergripande preventiv intervention kan vara effektiv för att minska frekvensen av självskadebeteende och att ungdomars medvetenhet om stigma kopplad till psykisk hälsa. Studie IV var en kvalitativ gruppintervjustudie varit tematisk analys användes för att utforska ungdomars erfarenheter av att delta i den skolvergripande preventiva interventionen samt deras perspektiv på psykisk hälsa. Viktiga resultat var noteringen av ett dilemma mellan autonomi och hjälpkänsla och det upplevda behovet av interventioner riktade mot psykisk hälsa bland ungdomar. Sammanfattningsvis bidrar denna avhandling till kunskapen om förbyggande insatser med fokus på självskadebeteende och psykisk hälsa bland ungdomar genom att dokumentera effekterna av ett skolvergripande preventivt program. Vidare innehåller avhandlingen insikter relaterade till skolbaserad prevention inklusive ungdomars erfarenheter information om mötning av självskadebeteende samt subgrupper inom individer med självskadebeteende.
