Sutter,Enrique Cantó,2012-04-02 This book is designed both for FPGA users interested in developing new specific components generally for reducing execution times and IP core designers interested in extending their catalog of specific components The main focus is circuit synthesis and the discussion shows for example how a given algorithm executing some complex function can be translated to a synthesizable circuit description as well as which are the best choices the designer can make to reduce the circuit cost latency or power consumption This is not a book on algorithms It is a book that shows how to translate efficiently an algorithm to a circuit using techniques such as parallelism pipeline loop unrolling and others Numerous examples of FPGA implementation are described throughout this book and the circuits are modeled in VHDL Complete and synthesizable source files are available for download *Hardware for Soft Computing and Soft Computing for Hardware* Nadia Nedjah,Luiza de Macedo Mourelle,2013-11-18 Single and Multi Objective Evolutionary Computation MOEA Genetic Algorithms GAs Artificial Neural Networks ANNs Fuzzy Controllers FCs Particle Swarm

Optimization PSO and Ant colony Optimization ACO are becoming omnipresent in almost every intelligent system design Unfortunately the application of the majority of these techniques is complex and so requires a huge computational effort to yield useful and practical results Therefore dedicated hardware for evolutionary neural and fuzzy computation is a key issue for designers With the spread of reconfigurable hardware such as FPGAs digital as well as analog hardware implementations of such computation become cost effective The idea behind this book is to offer a variety of hardware designs for soft computing techniques that can be embedded in any final product Also to introduce the successful application of soft computing technique to solve many hard problems encountered during the design of embedded hardware designs Reconfigurable embedded designs for GAs ANNs FCs and PSO are presented and evaluated Also the application of quantum based evolutionary computation and multi objective evolutionary computation as well as ACO are applied to solve hard problems related to circuit synthesis IP assignment mapping and routing of applications on Network On Chip infrastructures
