

## **GEOGRAPHY PAPER 1 REVISION QUESTIONS AND ANSWERS**

### **1. Outline the theories (evidences) that prove the shape of the earth as being spherical and not flat:**

If the earth were flat the sun would rise and set at the same time for people in all countries. As we know, the times of sunrise and sunset vary in different parts of the world. This is due to the shape of the earth.

The sun, the moon, the stars and other heavenly bodies always appear to be circular in outline. We can therefore conclude that they are spherical in shape. The earth should not be the only exception.

The shadow of the earth always has a circular edge. This can be noticed by observation of the earth's shadow on the moon during eclipse.

Viewed from the deck of a ship at the sea, the horizon appears to be circular.

An observer on a cliff watching the approach of a ship sees first the smoke, then the funnel and lastly the hull. If the earth were flat the whole of the ship would be seen all at once.

We know that we can travel round the world in various directions, and come back to the starting point. This is known as the circumnavigation of the earth.

Photographs radioed back by artificial earth satellites show the circular outline of the earth.

### **2. (a) Explain the two movements of the earth:**

The earth moves in two ways. Firstly it rotates on its axis, making a complete rotation in twenty-four hours.

Secondly it revolves around the sun, making one complete revolution in approximately 365  $\frac{1}{4}$  days. Its path of revolution is known as its orbit.

#### **(b) (i) State the effects of the rotation of the earth:**

It causes day and night.

It causes the deflection of wind and ocean currents.

It causes the daily rising and falling of the tides.

It causes a difference in time i.e. one hour between two meridians (longitudes) 15° apart.

It causes variation in atmospheric pressure on the earth's surface.

#### **(ii) State the effects of the earth's revolution:**

Is responsible for the change of the seasons (the four seasons).

It causes the varying lengths of day and night at different times of the year.

It changes the altitudes of the midday sun at different times of the year.

It fixes the tropics and the Arctic and Antarctic circles i.e. the varying positions of the earth in relation to the sun.

### **3(a) Draw a well-labelled diagram showing the main parts (zones) of the internal structure of the earth:**

A - SIAL

B - SIMA

C - MOHO DISCONTINUITY

D - UPPER MANTLE

E - LOWER MANTLE

## Structured Questions For Geography:

*Multiple Choice and Structured Questions in Geography* Mardsden W., William Edward Marsden, Tim Smith, 1975

*Multiple Choice and Structured Questions in Geography* William Curran, 1976      **Education in Singapore** Yew-Jin Lee, 2022-04-06 This edited book is a comprehensive resource for understanding the history as well as the current status of educational practices in Singapore. It is a one stop reference guide to education and educational issues concerns here. There are three sections. Part 1 provides a sectorial overview of how education has been organized in this country such as preschool, special needs, primary and secondary and adult education divisions. In Part 2 contributors critically delve into issues and policies that are pertinent to understanding education here such as underachievement, leadership, language education, assessment and meritocracy to question what Part 1 might have taken for granted. Part 3 contains the largest number of contributors because it offers a scholarly examination into specific subject histories. This section stands out because of the comparative rarity of its subject matter: history of Physical Education, Art, Music, Geography, Education etc in Singapore.

Excel HSC Survival Guide Pascal Press Staff, 1996      Improving Learning in Secondary Schools Kenneth Ndifor Tangie, 2015-09-10 *Improving Learning in Secondary Schools* brings together in a succinct, comprehensive and thought provoking manner several dimensions of classroom assessment feedback in one volume. It is based on the principle that students need feedback on their work and conduct at school in order to be able to correct misconceptions and omissions that can render them incapable of making progress and learning in a given subject. The book reports on a doctoral study that examined teachers' feedback practice and its relation to student learning in secondary schools. It presents a critical, fine grained classification and analysis of positive, neutral and negative feedback categories in teacher talk and writing which could generate a globally applicable typology and theory of classroom feedback. For some time now formative assessment generated feedback has been widely recommended for classrooms thanks mainly to compelling research based evidence showing the relative merits of formative assessment types over more traditional summative assessment practices. In this book it is suggested that the time has come to depart from such arguments because the mere presence of feedback in teacher talk and writing be it formative or summative is not enough to support learning. Feedback like formal and informal instruction and assessment is not mediated in vacuo; it is a social process taking place in a social setting conducted by on and for social actors. One must also consider the context especially the linguistic and socio cultural environment in which assessment feedback and learning occur but which also acts as a barrier and facilitator to successful feedback provision and uptake. This argument should constitute a starting point for reflection, debate and research into the effectiveness for learning of classroom assessment feedback. Therefore whilst complementing previous work on this subject, this book makes significant additions to a very important aspect of school life. Primary and secondary school teachers, university students, academics and researchers as well as educationists and policy makers in the domain of educational assessment will find in it an inseparable companion.
