The Effects of Using the Fluency and Automaticity Through Systematic Teaching with Technology Computer Program on Student Ability to Retrieve Math Facts from Memory in a Grade 3 Classroom Gretchen Lawler, 2009 The purpose of this study was to determine the effect of using the Fluency and Automaticity through Systematic Teaching with Technology (FASTT) Math computer program on student ability to retrieve math facts from memory in a grade 3 classroom. This study utilized a quasi experimental group pretest posttest design. This treatment took place for a 9 week period. Subjects participated in the FASTT math program for 20 minutes daily. Subjects were given daily instruction on their non automatized facts while continuing practice and review on facts being recalled from memory. The CRCSD Single digit Hand assessment, the Fuchs and Fuchs Addition Facts Timed Test and the Initial Fast Facts Placement test were given as pretests to establish baseline scores. These assessments were also given as posttests to determine the outcome of the treatment. Results showed an increase in subject fact retrieval and fact fluency for all subjects in the treatment. The results indicate the FASTT math program had a positive
