When you **classify** objects, you organize them into groups based on common characteristics.

1. What are some different ways you could classify these marbles?

You could classify these marbles by size, shape,
color, or the patterns / bands they have.

2. What characteristics do you think scientists use to classify rocks? Color, luster

mass, hardness, cleavage / fractures, other specific grains, and texture

Gizmo Warm-up

Rocks are classified by how they formed. The three types are:

- **Igneous rocks** form from cooling magma or lava.
- **Sedimentary rocks** form from the bonding of rock fragments such as sand, silt, or clay; from organic materials; and from chemicals dissolved in water.
- **Metamorphic rocks** form when other rocks are changed by heat and pressure.

In the *Rock Classification Gizmo*, you will get to explore these three types of rocks. Think about how each type of rock is formed.

1. **Fossils** are the remains of ancient plants and animals. Which type of rock do you think is most likely to contain fossils? Sedimentary rocks
2. **Foliation** occurs when minerals are flattened by heat and pressure. This results in a layered or banded texture. Which type of rock do you think is foliated? Metamorphic rocks
3. Air pockets can form in rapidly cooling magma or lava. In which type of rock would you expect air pockets? Igneous rocks
