Regulating Convergence Susan J. Drucker, Gary Gumpert, 2010 Traditionally the technologies of telecommunications broadcasting satellite and computing operated independently while the industries associated with each were regulated independently along the same lines. Technological convergence challenges the vertical regulatory models of broadcasting telecommunications and computer services while simultaneously challenging the traditional approach to regulation by nation states. It is time for a critical examination of regulations which support convergence while addressing the realities of the current media environment. This edited volume provides a heuristic analysis of the challenges facing regulators and media institutions. Chapters explore the nature of the laws and regulations straining under the new technological realities consider the changes already made to accommodate the new media landscape and examine new directions and approaches to the regulation of convergent media technologies and media institutions.

*Stellar Populations (IAU S262)* International Astronomical Union. Symposium, 2010-04-29 IAU Symposium 262 presents reviews on the current understanding of the theories of stellar evolution galaxy formation and galaxy evolution. It emphasises what we have learned in the past few years from massive surveys covering large portions of the sky e.g. SDSS, HDF, UDF, GOODS, COSMOS. Several critical aspects of research on stellar populations deserve further effort in order to be brought in tune with other areas of astrophysical research. The next ten years will see the opening of major observatories that will increase the quality and quantity of astronomical data by orders of magnitude. The expected benefits from these instruments for the study of stellar populations are explored. This critical review of state of the art observational and theoretical work will appeal to all those working on stellar populations from distant galaxies to local resolved galaxies and galactic star clusters.
