### Adding and Subtracting Polynomials

**Polynomials** are algebraic expressions that consist of a sum of monomials. A monomial is the sum of one or more variables and is placed in the form of  $ax^b$ , where  $a$  is a constant and  $b$  is a whole number. Polynomials are classified by the number of terms. The degree of a polynomial is the highest degree of the monomials in the polynomial. The degree of the polynomial is the same as the degree of the monomial with the highest degree.

The sum of a polynomial and a monomial is a polynomial. The sum of two polynomials is a polynomial. The difference of two polynomials is a polynomial.

**Example:** Increase fifteen hundred dollars by a polynomial five. Identify the polynomial and monomial. Subtract an example. What number represents the polynomial?

Monomial	Polynomial	Monomial, Polynomial, or Monomial	Sum or Difference
$15,000$	$5x^2 + 3x + 2$	Monomial	$15,000$
$5x^2$	$3x + 2$	Polynomial	$5x^2 + 3x + 2$
$5x^2 + 3x + 2$	$5x^2 + 3x + 2$	Polynomial	$10x^2 + 6x + 4$
$5x^2 + 3x + 2$	$5x^2 + 3x + 2$	Polynomial	$10x^2 + 6x + 4$

**Evidence-Based Outcome Research** Arthur M. Nezu,Christine Maguth Nezu,2007-09-27 This edited volume provides both conceptual and practical information for conducting and evaluating evidence based outcome studies It encompasses psychotherapy research for traditional mental health disorders eg depression anxiety as well as psychosocial based treatments provided to medical patient populations to have impact either on the disease process itself pain cardiovascular risk or to improve the quality of life of such individuals This is a hands on book whose major emphasis is on the practical nuts and bolts implementation of psychosocial based RCTs from conception to completion      Psychology and Mathematics Education Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative

theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
