AI Success Beyond Perfect Data Dr. M. Maruf Hossain, 2025-12-06 DESCRIPTION AI has become the cornerstone of innovation in modern enterprises. However, the common misconception that perfect data is a prerequisite often stalls initiatives. This book challenges that narrative, proving that AI success is possible even with messy, incomplete, or evolving data landscapes. The book offers a comprehensive roadmap for leveraging data science automation and generative AI. It begins with the principles of data science excellence, addressing how to extract value and insights from existing data. It then addresses automation, the deployment of ethical AI, and team leadership. Finally, it explores generative AI, such as its business potential, limitations, and how to balance LLMs with traditional AI techniques. Practical frameworks, real-world case studies, and success metrics are woven throughout the text. By the end of this book, readers will have a clear, actionable strategy to drive measurable AI outcomes regardless of their current data maturity. This guide empowers leaders to drive innovation and business transformation through AI.

The artificial author explores the theme of intellectual property in the era of generative artificial intelligence and reflects on the new concept of creativity brought by this disruptive technology. The book questions the concept of authorship and the possibility that machines might perform much of the creative work traditionally reserved for humans, leaving the latter in the mere role of controller of the outputs obtained. Through an interesting doctrinal reflection, a precise commentary on jurisprudential cases and a detailed survey of the terms of use of the main platforms, Simone Aliprandi offers an overview of the main emerging issues regarding copyright management of AI generated works. The book is written in an accessible style and is intended not only for legal professionals but for all those interested in the new challenges posed by artificial intelligence in the field of creativity. The work is completed by a series of explanatory diagrams and an extensive bibliography.

Reader Bot Naomi S. Baron, 2026-01-20. What happens to human reading when AI bots can do it for us? Explosive developments in artificial intelligence have awed everyday users with the technology's ability to draw on computer coding and especially to write. Those AI generated essays and poems, legal briefs and responses to requests for information are all visible evidence of large language models at work. What we don't see is the critical prior step before it can write: AI needs to read. While AI's written outcomes are remarkably similar to what a diligent student, lawyer or researcher might produce, AI doesn't read the way that humans do. Now that AI is proving an adept reader, what happens to our own reading skills and motivations especially at a time when both voluntary and school reading are increasingly on the decline? We have learned that when we let chatbots write for us there are pros and cons to handing over our virtual pens. It's critical that we also think through the consequences of relinquishing reading, a deeply human activity, to bots. What do we stand to gain and lose when we let AI read for us? Tracing the intersecting trajectories of AI and reading, *Reader Bot* tackles this vital question, revealing why we must be thoughtful about how we welcome AI as reader into our lives.
