5. More amplitude = louder. Sound waves. The rubber band has tension. Would the sound be louder?

Sound

Terms to Know

- Wavelength: Length of one complete cycle of a wave (peak-to-peak distance). Wavelength is the distance of one wave.
- Compressed Waves: Waves that are in close proximity to each other. Wave length is short.

Sound is Matter

Sound must travel in matter to travel through. Sound travels through solids because the particles are packed together. Solids are more efficient than liquids because the particles are further apart.

Example: Sound with frequency: 1000 Hz. Wavelength: 10 cm

Sound is Energy

Sound is a form of energy that is produced by vibrations. Objects that vibrate create sound. The higher the frequency, the more energy it has. For example, if you plucked this guitar string, it would make a sound. If you plucked this guitar string, it would make a higher pitch. Because that string has a higher frequency.

Amplitude

A sound has amplitude if high energy. Therefore, the sound is louder.

Frequency

A sound with frequency is high energy. Therefore, the sound is louder.

Wavelength

A sound with wavelength has short wave length. This sound would travel the shortest distance.

Wavelength

A sound with wavelength has long wave length. This sound would travel the longest distance.
