This book is a blend of both. It provides a mathematics book to read to engage with and to understand the whys the story behind the theorems. Written by an engineer not a mathematician who struggled to learn math in high school and in university, this book explains in an informal voice the mathematics that future and current engineering and science students need to acquire. If we learn math to understand it to enjoy it not to pass a test or an exam we all learn math better and there is no such a thing that we call math phobia. With a slow pace and this book everyone can learn math and use it as the author did at the age of 40 and with a family to take care of.

*Children* Robert V. Kail, Theresa Zolner, 2004-08-25 For Child Development in Psychology Education Human Development Child and Family Studies and Early Childhood Education particularly in applied College courses. Written by a well respected researcher in Cognitive Development and a noted Canadian clinical psychologist, the text on which the Canadian edition is based presents the core research theory and applications of Developmental Psychology in a chronological framework within an attractive profusely illustrated modular format. There are four key elements to this innovative text. First, each chapter is organized into a series of 3-5 manageable modules and incorporates a number of effective learning tools to help students retain and apply the information. Secondly, Kail and Zolner integrate the field by consistently presenting four fundamental themes in child development research. These themes are used throughout the book to provide students with a multi-layered foundation. Thirdly, Kail and Zolner introduce research methods in Chapter 2 and revisit methods again in every chapter. And finally, this text includes many applications demonstrating how research translates into practice.
