- a. Algorithm
- b. Practice guideline
- c. Protocol
- d. Order set

ANS: A

An algorithm is a stepwise decision-making flowchart for a specific care process or processes. A practice guideline is usually created by an expert panel and developed by a professional organization. Protocols are more directive and rigid than guidelines, and providers are not supposed to vary from a protocol. An order set consists of preprinted provider orders that are used to expedite the order process after a standard has been validated through analytic review of practice and research.

#### MULTIPLE RESPONSE

1. What considerations are taken into account in evidence-based nursing practice? (Select all that apply, one, some, or all.)

- a. Clinical expertise of the nurse
- b. Availability of staff and facility equipment
- c. Research evidence on the topic
- d. Patient knowledge of the disease
- e. Patient preference regarding care

ANS: A, C, E

Evidence-based nursing practice considers the best research evidence on the care topic along with clinical expertise of the nurse and patient preferences. For instance, when determining the frequency of vital sign measurement, the nurse would use available research and nursing judgment (stability, complexity, predictability, vulnerability, and resilience of the patient). Availability of staff and facility equipment and the patient's knowledge of the disease do not factor into evidence-based nursing practices.
