The Medical Interview The Three Function Approach 2e:

The Medical Interview Steven A. Cole, Julian Bird, 2000 The 2nd Edition of The Medical Interview presents basic interviewing skills in a systematic approach designed to assist students in mastering communicating with patients. A new unit on managing common challenging communicating situations including language and cultural barriers, pediatric and elderly patients, and non verbal communication has been added. The text emphasizes straightforward tasks, behaviors, and skills that can be easily demonstrated, practiced, and mastered by learners. Each of the three core functions of the interview are served by a concrete set of skills that students can understand, practice, master, and remember. The last two sections of the book specifically address processes for learning and teaching medical interviewing. The appendix contains an educational supplement for instructors that may be helpful in designing short courses on interviewing. The Three Functional Model offers learners a simplified, straightforward approach to the communication process. 2nd Edition now has new 2 color text design.

Newton-John, 2008-09-26 Largely reorganised and much expanded in this second edition, Practice and Procedures brings together in a single volume general methods of pain assessment and presents the wide range of therapies that can be provided by a range of health care disciplines. Authored by a multidisciplinary team of experts, chapters can stand alone for readers looking for a general overview of the methods of techniques for pain management available to them or work to complement chapters in the preceding three volumes providing practical procedures and applications in the management of acute, chronic and cancer pain. The book is divided into three parts. Part One covers the principles of measurement and diagnosis including history taking and examination, the selection of pain measures, diagnostic tests and novel imaging techniques. Part Two discusses the full range of therapeutic protocols available from pharmacological therapies through psychological techniques, physical therapy and international procedures to techniques specific to pain assessment and management in paediatric patients. Part Three provides information on planning, conducting, analysing and publishing clinical trials with invaluable guidance on the techniques of systematic review and meta analysis in pain research. Part Four considers the role of multidisciplinary pain management teams, their organization, their place within different health care systems and how best to manage change when implementing such a service. Part Five concludes the volume investigating the use of guidelines, standards and quality improvement initiatives in the management of post-operative pain and discussing the
