**The Micro Niche Method** MR David Wolfskehl,2011-04-01 The Micro Niche Method The Pathway to Premium Pricing and Increased Profitability for Today's CPAs By David Wolfskehl The primary marketing challenge faced by accounting firms today is differentiation. Firms tend to offer services in the same niches with few exceptions. In fact a review of top accounting firms in any city will likely produce the sense that the firms are largely interchangeable just change the names and the photos. When every firm looks alike the firms become commodities. They spend staggering amounts of time writing proposals in response to RFPs. They feel that clients constantly apply pressure about fees. They are afraid their clients will leave. What is more they know their marketing efforts are ineffective. Even referrals come from quid pro quo agreements. Their networking activities seem to be a waste of time. The challenge these firms face is how to differentiate their firm from the sea of sameness. Most resort to value pricing or fee discounting customer service claims and the like. Wolfskehl contends that these approaches will accomplish little if anything. Instead he offers The Micro Niche Method. In this powerful book Wolfskehl outlines why a micro niche is the best way to compete in today's very competitive marketplace. Why is the micro niche method effective as a competitive tool? Building a micro niche wins the competitive race every time because it sets a firm outside direct competition with other firms. When you build a micro niche according to this method there will be no direct competition. The cornerstone of the micro niche must be your particular specialization built upon your unique expertise. Because you are an expert people or businesses that need your unique blend of knowledge skill and experience will seek you out. Your contacts within the industry will open doors for you and send referrals to you because you are the expert with the unique ability to meet the needs of the client. In addition people will pay a premium price for your expertise and travel farther to see you. By building a micro niche you will eliminate competition and produce the work more efficiently and cost effectively. You will also be able to leverage the power of effective targeted marketing. As you work with your clients you will come to know your clients and the prospects in your circle of influence more intimately. You will learn to anticipate their needs and serve them more completely. Whether you want to open new opportunities for your partners and your firm or you want to grow a small firm with micro niches Wolfskehl has provided a step by step guide to the method that can set you or your firm on the path to greater success and profitability.

**Epidemiology and Economics** Salome Dürr,Victoria J. Brookes,Andres M. Perez,2021-08-09 **DGT-based**

**Measurement of Phosphorus in Sediment Microzones and Rhizospheres** Shengrui Wang,Zhihao Wu,2016-05-19 This book focuses on the development of DGT diffusive gradients in thin films and the related techniques for measuring and investigating the geochemical process and P transfer across the sediment water or sediment root interface in lakes. A series of DGT techniques such as new types of probes test methods in sediment or the rhizosphere DIFS DGT induced fluxes in sediments and soils model for kinetic P exchange CID computer imaging densitometry for S II and microchelex gel LA ICP

MS laser ablation inductively coupled plasma mass spectrometry have been developed. The corresponding chapters on the theory and methodology of DGT the internal P loading or P transfer across sediment root in two lakes provide insights into the research method and conclusions including the P release mechanism the quantification of internal P loading kinetic P exchange in DGT sediment interface Fe or S II microniches at submillimeter scales in sediments for the prediction of P release and DGT as a surrogate for the prediction of P uptake by roots. It also offers new perspectives in the fields of P analysis and P process in micro interfaces in lakes using DGT techniques. The P remobilization from Fe bound P the coupled Fe S II P geochemical reaction and algae biomass breakdown causing P release are elucidated using DGT methods in sediment layers. DGT parameters and curves for time or distance derived from DIFS can be used to assess kinetic P release in the sediment microzone. CID and LA ICP MS methods deliver Fe and S II images at submillimeter scales which can be used for the quantification of flux related to microniche peaks and the prediction of P release from Fe microniche or Fe S II P geochemical reactions. DGT measurements in situ in rhizosphere or rhizonbox can give CE effective concentration and CDGT values for the prediction of P accumulated in plant tissues. This book provides a valuable reference resource for senior graduate students lecturers and researchers in the fields of the geochemical process of eutrophic elements in lakes lake eutrophication mechanism and environmental analysis.
