similar to those used for oleo oil When the melting process is complete it is allowed to settle the precipitation of the fibre being accelerated by the addition of salt as in the case of oleo oil After the settling process the clear oil is siphoned to a receiving tank and what is not used in oleomargarine is tierced for shipment A good quality of leaf fat will produce by careful handling about 90 per cent of its weight in neutral and each animal will yield an average of eight or nine pounds

Comparatively little neutral is made from back fat The amount used however depends much on the relative demand for neutral and ordinary lard products as it is sometimes more advantageous to work fats into one form than another The oil made from back fat retains more of the flavor peculiar to lard and like the lower grades of oleo oil is less free from stearin or other undesirable constituents Some packing houses mix a small per cent of back fat with the leaf in making their highest grade of neutral and oleomargarine manufacturers sometimes use both grades of the finished oil in combination The difference in price between the two is usually slight and neutral made exclusively from leaf is generally sought Antiquarian bookseller s description 2017
