## February 5th.

Did you know that before the late 1800s when was no standard time? This meant the length of an hour could be a day longer and when it should start, in different towns and in different countries. This didn't help in time travel because the train didn't necessarily when people were making patterns and times had by chance. But with the Industrial Revolution began and people were starting to travel by train, having a standard time was of great importance.

For example, if a train was leaving the city by train, then when it would stop in another town the thought it was 10:30 am, but the train conductor thought it was 3:00:30 am the passenger could these putting his things on the train, and being able to call it in the other town.

To solve this problem in October of 1884, Chester A. Arthur, the President of the United States, held a conference in Washington D.C. that would set a standard time for the entire world. It was decided at the conference that a town in England called Greenwich would be the base of time for the world and all other countries would have their time zones off of how far they were from Greenwich. There was one challenge to standardizing time, and that was communicating the time with the world. For this, the invention of the radio was a great help. On that day in 1884 the Greenwich time signal was broadcast on the radio for the first time. This was a series of tones at the beginning of the hour that let everyone listening to the radio, put their clocks to the same time.
