The Art of Teaching Science Jack Hassard, Michael Dias, 2013-07-04 The Art of Teaching Science emphasizes a humanistic experiential and constructivist approach to teaching and learning and integrates a wide variety of pedagogical tools. Becoming a science teacher is a creative process and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers, mentors and instructors and through hands on minds on activities designed to foster a collaborative thoughtful learning environment. This second edition retains key features such as inquiry based activities and case studies throughout while simultaneously adding new material on the impact of standardized testing on inquiry based science and explicit links to science teaching standards. Also included are expanded resources like a comprehensive website, a streamlined format and updated content making the experiential tools in the book even more useful for both pre and in service science teachers. **Special Features** Each chapter is organized into two sections one that focuses on content and theme and one that contains a variety of strategies for extending chapter concepts outside the classroom. Case studies open each chapter to highlight real world scenarios and to connect theory to teaching practice. Contains 33 Inquiry Activities that provide opportunities to explore the dimensions of science teaching and increase professional expertise. **Problems and Extensions** On the Web Resources and Readings guide students to further critical investigation of important concepts and topics. An extensive companion website includes even more student and instructor resources such as interviews with practicing science teachers, articles from the literature, chapter PowerPoint slides, syllabus helpers, additional case studies, activities and more. Visit <http://www.routledge.com/textbooks/9780415965286> to access this additional material.

Provenance and Annotation of Data and Processes Bertram Ludäscher, Beth Plale, 2015-03-20 This book constitutes the revised selected papers of the 5th International Provenance and Annotation Workshop (IPA 2014) held in Cologne, Germany, in June 2014. The 14 long papers, 20 short papers, and 4 extended abstracts presented were carefully reviewed and selected from 53 submissions. The papers include tools that enable provenance capture from software compilers from web publications and from scripts using existing audit logs and employing both static and dynamic instrumentation.

John Michels (Journalist), 2012 **Data Management in Grid and Peer-to-Peer Systems** Abdelkader Hameurlain, 2008-08-25 First International Conference on Data Management in Grid and Peer to Peer P2P Systems. **Globe 2008** Data management can be achieved by different types of systems from centralized file management systems to grid and P2P systems passing through distributed systems, parallel systems and data integration systems. An increase in the demand of data sharing from different sources accessible through networks has led to proposals for virtual data integration approach. The aim of data integration systems based on the mediator wrapper architecture is to provide uniform access to multiple distributed, autonomous and heterogeneous data sources. Heterogeneity may occur at various levels e.g. different hardware platforms, operating systems, DBMS. For more than ten years research topics such as grid and P2P systems have been very

active and their synergy has been pointed out They are important for scale d tributed systems and applications that require effective management of voluminous distributed and heterogeneous data This importance comes out of characteristics offered by these systems e g autonomy and the dynamicity of nodes decentralized control for scaling Today the grid and P2P systems intended initially for intensive computing and file sharing are open to the management of voluminous heteroge ous and distributed data in a large scale environment
