**Understanding the Changing Planet** National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Strategic Directions for the Geographical Sciences in the Next Decade, 2010-06-23  
From the oceans to continental heartlands human activities have altered the physical characteristics of Earth's surface. With Earth's population projected to peak at 8 to 12 billion people by 2050 and the additional stress of climate change, it is more important than ever to understand how and where these changes are happening. Innovation in the geographical sciences has the potential to advance knowledge of place based environmental change, sustainability, and the impacts of a rapidly changing economy and society. *Understanding the Changing Planet* outlines eleven strategic directions to focus research and leverage new technologies to harness the potential that the geographical sciences offer. [Human Geography](#) Erin H.

Fouberg, Alexander B. Murphy, 2020-08-04. *Fouberg Murphy Human Geography: People, Place, and Culture* 12th Edition. Teaches students to appreciate the diversity of people, places, and cultures and understand the role people play in shaping our world. The goals of this edition are to provide geographic context to global, regional, national, and local issues and to teach students to think geographically and critically about these issues. *Human Geography* features beautifully designed maps, dozens of vibrant photographs taken by the author team and author and guest field notes that help students see how geographers read cultural landscapes and use fieldwork to understand places. Fouberg's *Human Geography* 12th Edition now integrates Threshold Concepts to help students develop their ability to think geographically. Once they learn and apply one of these concepts in the context of a given place, students integrate it into their thinking and can draw from it as they learn new material and explore other places. **A Concise Advanced Geography** Tim Bayliss, 1995 Course companion for students of advanced geography. **Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation** Christopher B. Field, Vicente Barros, Thomas F. Stocker, Qin Dahe, 2012-05-28. This Intergovernmental Panel on Climate Change Special Report (IPCC SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events interacting with exposed and vulnerable human and natural systems can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather and climate related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters, and adaptation to climate change, including policymakers, the private sector, and academic researchers. **Resources and Planning** Brian Goodall, Andrew Kirby, 1979. *Geographical Review* Isaiah Bowman, G.
