J2EE Design Patterns William Crawford,Jonathan Kaplan,2003 Architects of buildings and architects of software have more in common than most people think Both professions require attention to detail and both practitioners will see their work collapse around them if they make too many mistakes It's impossible to imagine a world in which buildings get built without blueprints but it's still common for software applications to be designed and built without blueprints or in this case design patterns A software design pattern can be identified as a recurring solution to a recurring problem Using design patterns for software development makes sense in the same way that architectural design patterns make sense if it works well in one place why not use it in another But developers have had enough of books that simply catalog design patterns without extending into new areas and books that are so theoretical that you can't actually do anything better after reading them than you could before you started Crawford and Kaplan's J2EE Design Patterns approaches the subject in a unique highly practical and pragmatic way Rather than simply present another catalog of design patterns the authors broaden the scope by discussing ways to choose design patterns when building an enterprise application from scratch looking closely at the real world tradeoffs that Java developers must weigh when architecting their applications Then they go on to show how to apply the patterns when writing realworld software They also extend design patterns into areas not covered in other books presenting original patterns for data modeling transaction process modeling and interoperability J2EE Design Patterns offers extensive coverage of the five problem areas enterprise developers face Maintenance Extensibility Performance System Scalability Data Modeling Business Object Modeling Transactions process Modeling Messaging Interoperability And with its

Feuerstein,2009-09-18 Seminar paper from the year 2009 in the subject Computer Science Commercial Information Technology grade 1 0 University of Regensburg language English abstract Enterprise Service Busses and related concepts like Service Oriented Architectures are increasing in popularity Businesses are facing new challenges and networking inter and intra enterprise cooperation and collaboration are getting more and more crucial for being ahead of the competitors Enterprise Service Buses are providing a necessary high scalable and flexible IT architecture for integration an improved communication and reducing complexity at least in theory The major goal of this project seminar is to examine the practical use of ESB The first part of this documentation will provide the reader with some theoretical foundations on the Enterprise Service Bus integration paradigms and some required functions of Enterprise Service Buses The following section will then focus on one specific Open Source ESB the Apache ServiceMix that will be presented briefly Its main functions and concepts will be examined in detail Furthermore the setup of a generic development environment debugging principles and tools will be described The following part is the development of an explorative case study that illustrates important features and characteristics of an ESB in a practical way The focus is to illustrate the routing and messaging capabilities of Apache ServiceMix Based on an everyday example the message flow in a restaurant we are trying to demonstrate development principles analyze useful patterns and also illustrate common pitfalls and challenges In the final part lessons learned and some generic recommendations for possible applications of ESBs are presented The project team is observing that ESB is a highly important integration model especially in Service Oriented Architectures Furthermore for some single and clearly defined scenarios the functions provided by Open Source ESBs are already satisfactory On the other hand side ESBs are still emergent there are a lot of instability complexity and a lack of development tools The recommendation is to clearly evaluate ESB and also optional other solutions before its practical application in a real world scenario **Web Services Business**
