

# VOLVO PENTA INBOARD DIESEL

# D4-300

231 kW (300 bhp) crankshaft power acc. to ISO 8698-5

**NEW!**

## Exceptional diesel performance for its size

Volvo Penta's 4-cylinder D4-300 is developed from the latest design in modern diesel technology. The engine has common rail fuel injection system, double overhead cam-shafts, 4 valves per cylinder, turbocharger and aftercooler. Together with a large swept volume and the EVC system (Electronic Vessel Control), this results in world-class diesel performance, combined with low emissions. The engine is extremely compact for its high output.

### World-class performance

The common rail fuel injection system, controlled by EVC, in combination with a large swept volume, ensures outstanding torque during acceleration, with virtually no sign of smoke. This matched with the engine's high load carrying capability creates a sporty handling and power when needed.

### Compact and robust

The engine is extremely compact for its large swept volume and high output. With the reduced transmission, driving the high-pressure injection pump and the camshafts, a high degree of integrated systems, a high-efficiency aftercooler, a maximization performed with very few hoses, and a fully symmetrical engine, the package simply goes that compact.

The rigid cast iron cylinder block and head, combined ladder frame and balance shafts, and exactly controlled (up to three step) fuel injection gives excellent onboard comfort with low noise and vibration levels.

### EVC-E

The next generation of the proven Electronic Vessel Control offers further enhancements to the driver experience.

The robust ID-key with touch less technology is standard.

Ergonomically designed controls engage smoothly and allow fast maneuvering with fingertip precision. Pushbuttons integrated on the control give easy access to optional functions such as Low Speed and Single Lever Control.

On-water weight and increased power

Complete the helm with your choice of easy to read gauges and displays, including the 7" color display. Add the trip computer function for accurate fuel usage, and minimized environmental impact. Engine synchronization is standard in twin installations.

### A propulsion package fully matched, tested and supported by one company

Volvo Penta's hydraulically shifted reverse gear has been specially developed with a view to increasing the standard of comfort on board.

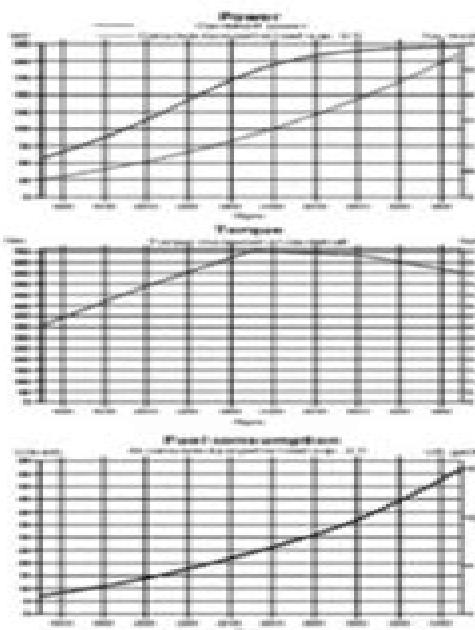

Matched with the characteristics of the D4 engine, the hydraulic shifting mechanism and a gear technology that uses bevel gears throughout the gear train, we have developed a complete package for high torque, operational reliability and reduction of engine noise and vibrations.

The combination of 18° down angle, larger dimensions and small dimensions provides for optimized installations. Modules are also available.

In order to get full benefit of the EVC system the reverse gear is equipped with electric shifting valves.

### Meeting new emission standards

The common rail injection system in combination with electronics and an advanced combustion system are setting new standards in minimizing NOx, emissions and particulates. The engine complies with IMO I/NOx limits and the corresponding emission requirements EU RCD and US EPA Tier 3.
