Senem Deviren, 2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements

Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture

**Urban Sustainability Through Environmental Design** Kevin Thwaites, Sergio Porta, Ombretta Romice, Mark Greaves, 2007-12-06 What can architects landscape architects and urban designers do to make urban open spaces streets and squares more responsive lively and safe Urban Sustainability through Environmental Design answers this question by providing the analytical tools and practical methodologies that can be employed for sustainable solutions to the design and management of urban environments The book calls into question the capability of quick fix development solutions to provide the establishment of fixed communities and suggests a more time conscious and evolutionary approach This is the first significant book to draw together a pan European view on sustainable urban design with a specific focus on social sustainability It presents an innovative approach that focuses on the tools of urban analysis rather than the interventions themselves With its practical approach and wide ranging discussion this book will appeal to all those involved in producing communities and spaces for sustainable living from students to academics through to decision makers and professional leaders

Friedman then examines these challenges through thirty chapters of interest to urban designers architects civil and construction engineers and town planners Each of these topics represents an aspect of urban design and describes an innovative solution and offers a detailed description of underlying principles The highly illustrated text presents innovative urban design strategies based on sustainable principles Integrated with each chapter are several international case studies illustrating design implementations

Ecological Urban Architecture Thomas Schröpfer, 2012-12-13 The goal of advancing eco cities often remains confined to political or technological issues This book establishes a focus on architectural and infrastructural design approaches to sustainable urban development Taking as a basis the critical assessment of the five prototypical eco cities of Vauban Freiburg solarCity Linz Valdespartera Sarriguren Pamplona und Bo01 Malm the book identifies fields in which architectural and urban designers can use their creative skills and methods to achieve sustainable results on the urban scale The themes of Materialize Mobilize Simulate and Transform highlight the shift from the manipulation of quantitative variables to interactive relationships effecting qualitative outcomes in design For example Materialize explores the potential of eco design beyond the traditional palette of materials to show how spatial boundaries can be re imagined as gradients of conditioned versus unconditioned space working with climatic conditions rather than material boundaries to help generate new forms of urban architecture

**Sustainable Urban Design** Adam Ritchie, Randall Thomas, 2013-12-16 By the end of the twenty first century it is thought that three quarters of the world s population will be urban our future is in cities Making these cities healthy vibrant and sustainable is an exceptional challenge which this book addresses It sets out some of the basic principles of the design of our future cities and through a series of carefully selected case studies from leading designers experience illustrates how these ideas can be put into practice Building on the first edition s original format of design guidance and case studies this new edition updates the ideas and techniques resulting from further research and practice by the contributors This book emphasises the enormous progress made towards exciting new designs that integrate good design with resource efficiency

Regenerative Urban Design and Ecosystem Biomimicry Maibritt Pedersen Zari, 2018-05-20 It is clear that the climate is changing and ecosystems are becoming severely degraded Humans must mitigate the causes of and adapt to climate change and the loss of biodiversity as the impacts of these changes become more apparent and demand urgent responses These pressures combined with rapid global urbanisation and population growth mean that new ways of designing retrofitting and living in cities are critically needed Incorporating an understanding of how the living world works and what ecosystems do into architectural and urban design is a step towards the creation and evolution of cities that are radically more sustainable and potentially regenerative Can cities produce their own food energy and water Can they be designed to regulate climate provide habitat cycle nutrients and purify water air and soil This book examines and defines the field of biomimicry for sustainable built environment design and goes on to translate ecological knowledge into practical methodologies for architectural and urban design that can proactively respond to climate change and biodiversity loss These methods are tested and exemplified through a series of case studies of existing cities in a variety of climates Regenerative Urban Design and Ecosystem Biomimicry will be of great interest to students professionals and researchers of architecture urban design ecology and environmental studies as well as those interested in the interdisciplinary study of sustainability ecology and urbanism

Urban Design for an Urban Century Lance Jay Brown, David Dixon, 2014-05-27 This book offers a comprehensive introduction to urban design from a historical overview and basic principles to practical design concepts and strategies It discusses the demographic environmental economic and social issues that influence the decision making and implementation processes of urban design The Second Edition has been fully revised to include thorough coverage of sustainability issues and to integrate new case studies into the core concepts discussed

**Urban Design** Cliff Moughtin, 1999 This book deals with a wide range of techniques used in the urban design process It is invaluable for architecture planning landscape and surveying students and will also help professionals in the day to day practice A method of urban design is developed which has sustainability and environmental protection at the centre of its philosophy Previously literature regarding the urban design method has been almost totally neglected this book introduces the topic to the reader A number of techniques are illustrated by example or case study Where techniques are discussed they are located within the structure of the design process The book develops a logical framework for a process which includes problem definition survey analysis concept generation evaluation and implementation It is this framework which is presented here as a discourse towards the development of an urban design method This book is a practical guide one that the authors themselves would have found useful as students or in the early years of their professional careers It is organized so that each chapter provides guidance which hitherto students and practitioners in this field have had to discover for themselves often with some difficulty since methods and techniques for urban design is a broad topic thinly spread in published form

Techniques illustrated by example or case study Practical guide to urban design which covers a core subject for undergraduate degree courses Techniques located within structure of the design process Nature Based Strategies for Urban and Building Sustainability Gabriel Perez, Katia Perini, 2018-02-14 Nature Based Strategies for Urban and Building Sustainability reviews the current state of the art on the topic In the introduction the editors review the fundamental concepts of nature elements in the built environment along with the strategies that are necessary for their inclusion in buildings and cities Part One describes strategies for the urban environment discussing urban ecosystems and ecosystem services while Part Two covers strategies and technologies including vertical greening systems green roofs and green streets Part Three covers the quantitative benefits results and issues and challenges including energy performances and outdoor comfort air quality improvement acoustic performance water management and biodiversity Provides an overview of the different strategies available to integrate nature in the built environment Presents the current state of technology concerning systems and methodologies on how to incorporate nature in buildings and cities Features the latest research results on operation and ecosystem services Covers both established and new designs including those still in the experimental stage

**Sustainable Environmental Design in Architecture** Stamatina Th. Rassia, Panos M. Pardalos, 2012-02-02 Over the last few decades there have been dramatic improvements in the understanding and research of environmental design Numerous methods have been developed to enhance architectural design in order for it to be more energy efficient sustainable and health enhancing This book presents several theories and

techniques that can be used to improve how buildings are engineered and designed in order to utilize more sustainable construction methods while promoting the health of the building's occupants. Contributions to the study of environmental design have come from a diversity of fields including applied mathematics, optimization, computer science, medical research, psychology, management science, architecture, and engineering. The techniques developed in these areas of research can be used to increase building performance, occupant satisfaction, productivity, and well-being, and reducing the incidence of health conditions and chronic diseases related to the use of a designed space. This book provides architectural practitioners, civil engineers, as well as other interdisciplinary researchers with the techniques needed to design, implement, and test for sustainability and health promotion in new or existing structures. Living Architecture, Living Cities Christopher Day, Julie Gwilliam, 2019-11-08. It is widely accepted that our environment is in crisis. Less widely recognized is that three quarters of environmental damage is due to cities, the places where most of us live. As this powerful new book elucidates, global sustainability is therefore directly dependent on urban design. In *Living Architecture, Living Cities*, Christopher Day and Julie Gwilliam move beyond the current emphasis on technological change. They argue that eco-technology allows us to continue broadly as before and only defers the impending disaster. In reality, most negative environmental impacts are due to how we live and the things we buy. Such personal choices often result from dissatisfaction with our surroundings. As perceived environment has a direct effect on attitudes and motivations, improving this can achieve more sustainable lifestyles more effectively than drastic building change with its notorious performance gap limitations. As it is in places that our inner feelings and material reality interact, perceived environment is place-based. Ultimately, however, as the root cause of unsustainability is attitude, real change requires moving from the current focus on buildings and technology to an emphasis on the non-material. Featuring over 400 high-quality illustrations, this is essential reading for anyone who believes in the value and power of good design. Christopher Day's philosophy will continue to inspire students with an interest in sustainable architecture, urban planning, and related fields. *Global Art, Culture, and Media Perspectives* Hemanth Pawar, 2025-02-20. *Global Art, Culture and Media Perspectives* offers a comprehensive exploration of the intricate relationships between art, culture, and media in our interconnected world.
