**Sustainable Development (2 Volume Set)** C.A. Brebbia, 2015-10-06 This collection of research papers presented at meetings organised by the Wessex Institute of Technology WIT concerns a variety of issues relating to the area of sustainable development WIT has a long and very successful record of organising conferences on the topic of sustainability which requires an interdisciplinary approach Any sustainable solutions that are derived solely from the perspective of a single discipline may have unintended damaging consequences that create new problems Thus effective sustainable solutions require the collaboration of scientists and engineers from various disciplines as well as planners architects environmentalists policy makers social scientists and economists The contents of this book reflect that interdisciplinary approach and include topics under the main areas of Sustainable development and planning Disaster management Air pollution Urban transport Ecosystems and Water resources management *Urban Transport XXI* C.A. Brebbia, J.L. Miralles i Garcia, V. de Esteban Chapapria, 2015-06-02 *Urban Transport XXI* contains the proceedings of the 21st International Conference on Urban Transport and the Environment The series of annual conferences organised by the Wessex Institute was first held in 1995 Transportation in urban areas with its related environmental and social impacts is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems Urban transport systems require considerable studies to devise and then safeguard their operational use maintenance and safety Transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres Clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute concern with financial political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public Papers cover such topics as Urban Transport Planning and Management Urban Transport Strategies Public Transport Systems Environmental Aspects Economic and Social Impact Safety and Security Travel Behaviour Studies Customer Satisfaction Transportation Modelling and Simulation Infrastructure Development Intelligent and Advanced Transport Systems Transportation Integration City Logistics Resilience and Inter modal Transport Systems Mass Transport Strategies Social Impacts Freight Transport Railway Systems Transport Governance and Administration Port and City Mobility and Public Space Life Cycle Management *Sustainable Development and Planning VII* Ö. environmental degradation In recent years in many countries an increase in spatial problems has led to planning crises Planning problems are often associated with uneven development deterioration of the quality of urban life and destruction of the environment The increasing urbanisation of the world coupled with the global issues of environmental pollution resource shortage and economic restructuring demand that we ensure a decent quality of life for our cities Other environments such as rural areas forests coastal regions and mountains face their own problems that urgently require solutions in order to avoid irreversible damage Effective strategies for management should consider planning and regional development two closely related disciplines and emphasise the demand to handle these matters in an integrated way The papers in the book cover such topics as Regional Planning City Planning Sustainability and the Built Environment Cultural Heritage Environmental Management Environmental Policies and Planning Sustainable Tourism Resources Management Social and Political Issues Rural Developments Sustainable Solutions in Emerging Countries Transportation Energy Resources Environmental Economics Sustainable Assessment Sustainable Development Indicators Sustainability Modelling Governance Resilience Community Planning Planning for Equality Quality of Life

*India and the Region* Usha Iyer-Raniga, 2021-04-16 This book follows on previous works addressing sustainable development research in the Asia Pacific region. It mainly focuses on India, a country currently facing immense challenges in the form of climate change, rapid urbanisation and population pressures in its journey to help achieve the Sustainable Development Goals. Expecting to surpass China in terms of population in the near future, India needs to develop its own solutions in order to uphold its commitments under the Paris Agreement. This book makes a contribution in that direction by presenting case studies on various aspects of the built environment from education to managing cities, procurement and considerations for a circular economy. The papers gathered here offer a vital resource for government policymakers, educators and current and future professionals, equipping them with the knowledge and expertise they need in order to overcome today's complex challenges in the built environment.

Future Challenges in Evaluating and Managing Sustainable Development in the Built Environment Peter S. Brandon, Patrizia Lombardi, Geoffrey Q. Shen, 2017-04-05 Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development. It examines the methods of evaluation, the use of technology, the creation of new models and the role of human factors for examining and developing the subject over the next twenty years.

**Evaluation of the Built Environment for Sustainability** Vincenzo Bentivegna, P.S. Brandon, Patrizia Lombardi, 2003-09-02 Sustainability in the built environment is a major issue facing policy makers, planners, developers and designers in the UK, Europe and worldwide. The measuring of buildings and cities for sustainability becomes increasingly important as pressure for green sustainable development translates into policy and legislation. The problems of such measurement and evaluation are presented by the authors in contributions which move from the general to the particular, e.g. from a general framework for an environmentally sustainable form of urban development to a specific input/output model application to environmental problems. The book is divided into three parts: the first covers city models and sustainable systems, research programmes, environmental policies, green corporations and collaborative strategies to make urban development more sustainable; part two discusses the problems of evaluating the built environment in planning and construction, covering economic and environmental methods and construction development and regeneration processes; part three illustrates a number of applications using different approaches and techniques and referring to a range of environmental aspects of the natural and built environment from maintaining historic buildings to transport management and air pollution monitoring.

Sustainable Practices in the Built Environment Craig Langston,2008-09-10 Sustainability is a key issue and its impact on the construction industry as one of the major users of the Earth s resources is starting to take hold This book deals with sustainability as it affects the construction industry looking at the techniques and issues which designers engineers planners and construction managers will have to deal with in their day to day activities It covers methods of analysis such as environmental impact assessment and cost benefit analysis as well as topics on design and energy regulation and conservation The book is an important introduction to the subject for senior undergraduate and postgraduate students Given the importance and novelty of the subject professionals in the construction industry will also find the book valuable      *The Path to a Sustainable Built Environment* Christopher Kent Perkes,2017 How do development processes impact sustainability on a citywide scale This thesis initiates a significant conversation regarding city planning design and development processes through four development case studies two in Houston Texas and two in Portland Oregon Houston and Portland maintain seemingly diametrically opposed land development processes and as such define the outer boundaries of the spectrum By studying the outliers other urban areas should be able to place themselves on this spectrum eventually deciding which lessons are applicable to their specific context Further I have explicitly chosen one controversial and one noncontroversial case study for each city to research an underlying hypothesis does constructive conflict result in more sustainable development Methods included studying development models and interviewing actors who participated in the development process in the case studies Throughout the research consistent themes emerged even in seemingly opposite approaches to land development First there was overwhelming consensus among actors in the development process that developers hold considerable influence on the sustainability of the built environment and are canonically the empowered decisionmakers in the process Second there is no ideal or one size fits all development process for all cities but there are consistent steps and contextual best practices which should be included These steps largely revolve around broad based community support and creation of accountability Third and perhaps most importantly the research suggests that constructive conflict does tend to create more sustainable development Fourth and last the benefit the development provides to the surrounding community should be prioritized By analyzing planning design and development processes which are often muddled and unclear I hope to have swept some dirt off of the path to a sustainable built environment      **Economic Aspects of Sustainable**
