From the reading 4.1 The Organization of the Human Body, 4.2 Digestive System Overview; the video Action of an Enzyme:

- Describe the difference between cells, tissues, organs, organ systems, and organism. **Cells are the basic structural and functional unit of all life. Tissues are groups of cells that share a common structure and function and work together. Organs are a group of tissues arranged in a specific manner to support a common physiological function. Organ systems are two or more organs that support a specific physiological function. An organism is the complete living system capable of conducting all of life's biological processes.**
- What is the difference between chemical digestion and mechanical digestion? **Chemical digestion involves enzymes in digestive secretions that break chemical bonds within nutrients so that they are small enough to be absorbed while. Mechanical digestion consists of chewing, crushing, and grinding to break apart food and then moving it through the GI tract using muscular contractions, called peristalsis and segmentation.**
