[The most important facts to consider in SEO](#) Stephanie Kremer, 2018-11-06. Document from the year 2018 in the subject Business economics Business Management Corporate Governance grade 1 3 Munich University of Applied Sciences language English abstract Only in Germany 23.9 million of the over 14 year old german speaking population used search engines on the internet for their information search daily in 2017. Compared to 21.08 milion in 2016 this is a growth of 13.38 percent. According to other studies over 85 percent of all internet sessions start with the type in into search engines. Therefore Search Engine Optimization SEO offers a huge potential for companies to deliver the right information to interested users when they ask for it actively. To succeed against their competitors it is important for companies to appear as high as possible in the search engine results pages SERPs. The question about the most important factors to consider in SEO for good ranking positions is always highly discussed in SEO communities because Google reveals as little as possible to avoid manipulation. But one thing appears to be clear because of highly developed machine learning algorithms which influence Googles valuation of a website for its ranking classical ranking factors can no longer be used as standard for every search query anymore but relevant content as well as user experience have become important.

Optimization of Cooperative Banks' Websites by Application of Persuasive Methods, 2016-12-28 Bachelor Thesis from the year 2015 in the subject Business economics Offline Marketing and Online Marketing grade 2 3 University of Applied Sciences Essen language English abstract The increasing requirements for the effectivity of a website and the more and more complex knowledge about human behavioral patterns are challenging the online presence of banks. Nowadays a good usability by itself is no significant basis for decision making and the choice of a house bank. Good usability is expected. Rather the user experience is an essential factor for the success of a website. Due to the fact that the human behavior is determined by unconscious patterns it is necessary to take these into consideration when conceptualizing a website in order to develop a user centered target oriented website design. By means of persuasive design it is possible to directly address these behavioral patterns. Therefore it is reasonable to optimize the user experience by the application of persuasive design methods. This shall provide a motivating experience in consideration of decision making tools and motives of the user. In this way it is possible to generate competitive advantage.

and to gain new customers as well as to boost customer loyalty Here the need for emotionalizing plays a particularly important role But especially in view of banking products it is difficult to create an emotional presentation due to the absence of haptics and because accounts are rather a functional instrument and a means to an end than a product with a high pleasure value Cooperative banks however benefit particularly from this competitive advantage Due to the cooperative idea and their values and principles they are enabled to address potential customers emotionally If values are illustrated the users have the opportunity to identify themselves with those and to align them with their own ideals
