**Science in the Media** Paul R Brewer, Barbara L Ley, 2021-09-30 This timely and accessible text shows how portrayals of science in popular media including television movies and social media influence public attitudes around messages from the scientific community affect the kinds of research that receive support and inform perceptions of who can become a scientist. The book builds on theories of cultivation priming framing and media models while drawing on years of content analyses, national surveys and experiments. A wide variety of media genres from Hollywood blockbusters and prime time television shows to cable news channels and satirical comedy programs, science documentaries and children's cartoons to Facebook posts and YouTube videos are explored with rigorous social science research and an engaging accessible style. Case studies on climate change, vaccines, genetically modified foods, evolution, space exploration and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender, race and other social identities. **Science in the Media** illuminates how scientists and media producers can bridge gaps between the scientific community and the public, foster engagement with science and promote an inclusive vision of science while also highlighting how readers themselves can become more active and critical consumers of media messages about science. **Science in the Media** serves as a supplemental text for courses in science communication and media studies and will be of interest to anyone concerned with publicly engaged science.

**The Age of Decentralization** Sam Ghosh, Subhasis Gorai, 2024-10-15 The Age of Decentralization talks about various decentralization technologies including Web3, decentralized identity and decentralized storage, and how they can be incorporated in traditional tech architectures to improve technical and business performance. In this book, the authors take us on a journey through the tech landscape exploring how decentralized technologies including Web3 are on the verge of becoming mainstream and offer a practical roadmap for understanding and embracing this shift. Web2 brought us the great centralization by centralizing not only data but also business processes, blurring the industry boundaries. So payment platforms started offering e-commerce services and ride-hailing services started delivering food. Scale became the most effective moat. But at the same time, these huge platforms became a magnet for security threats and started violating user privacy rights and consumer rights. The authors argue that the technological, regulatory, and social landscape is ready for the next evolution of technology systems as decentralization technologies get incorporated into traditional architectures. This book serves as a guide for readers to understand the fundamentals of Web3 along with other decentralized technologies and creates a framework for incorporating them into traditional architectures. At the same time, the authors explore the organization level as well as the macro implications of decentralized technologies.
